

Supplementary Figures and Tables

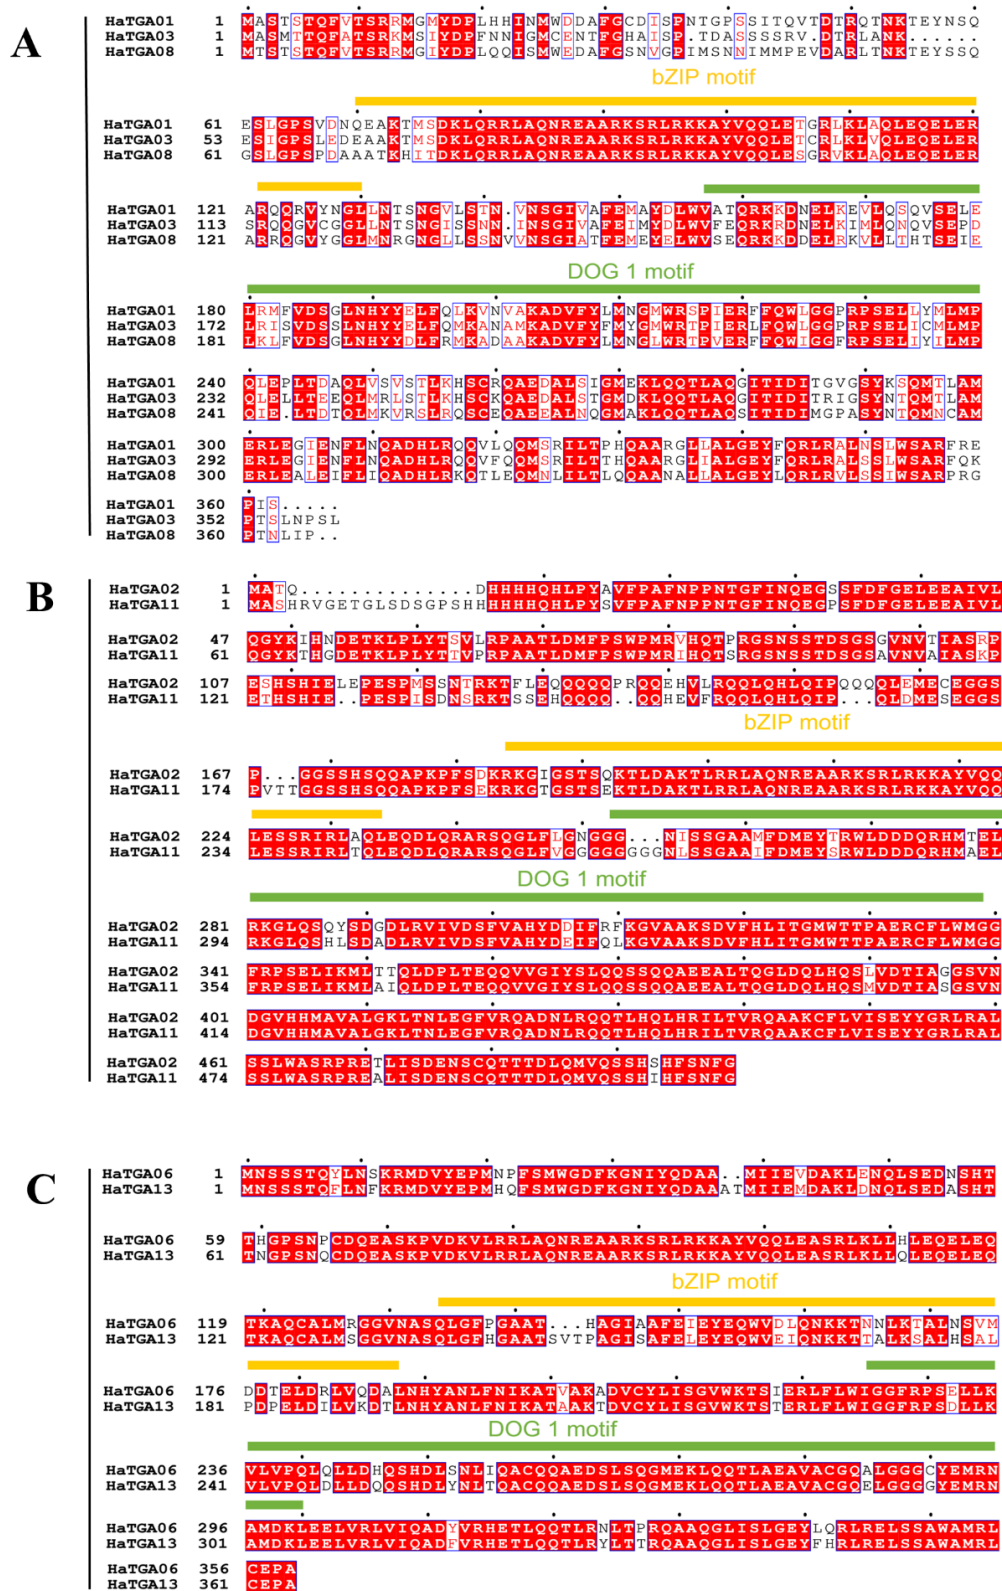

Figure S1. Protein sequence alignment analysis of closely related HaTGA. (A) Multiple sequence alignment of HaTGA01, HaTGA03, and HaTGA08, highlighting similarities and differences in their amino acid sequences. (B) Pairwise protein sequence alignment of HaTGA02 and HaTGA11 protein sequence. (C) Protein sequence conservation of HaTGA06 and HaTGA13. The protein sequence annotated by yellow and green lines indicated the presence of the bZIP and DOG1 domains, respectively.

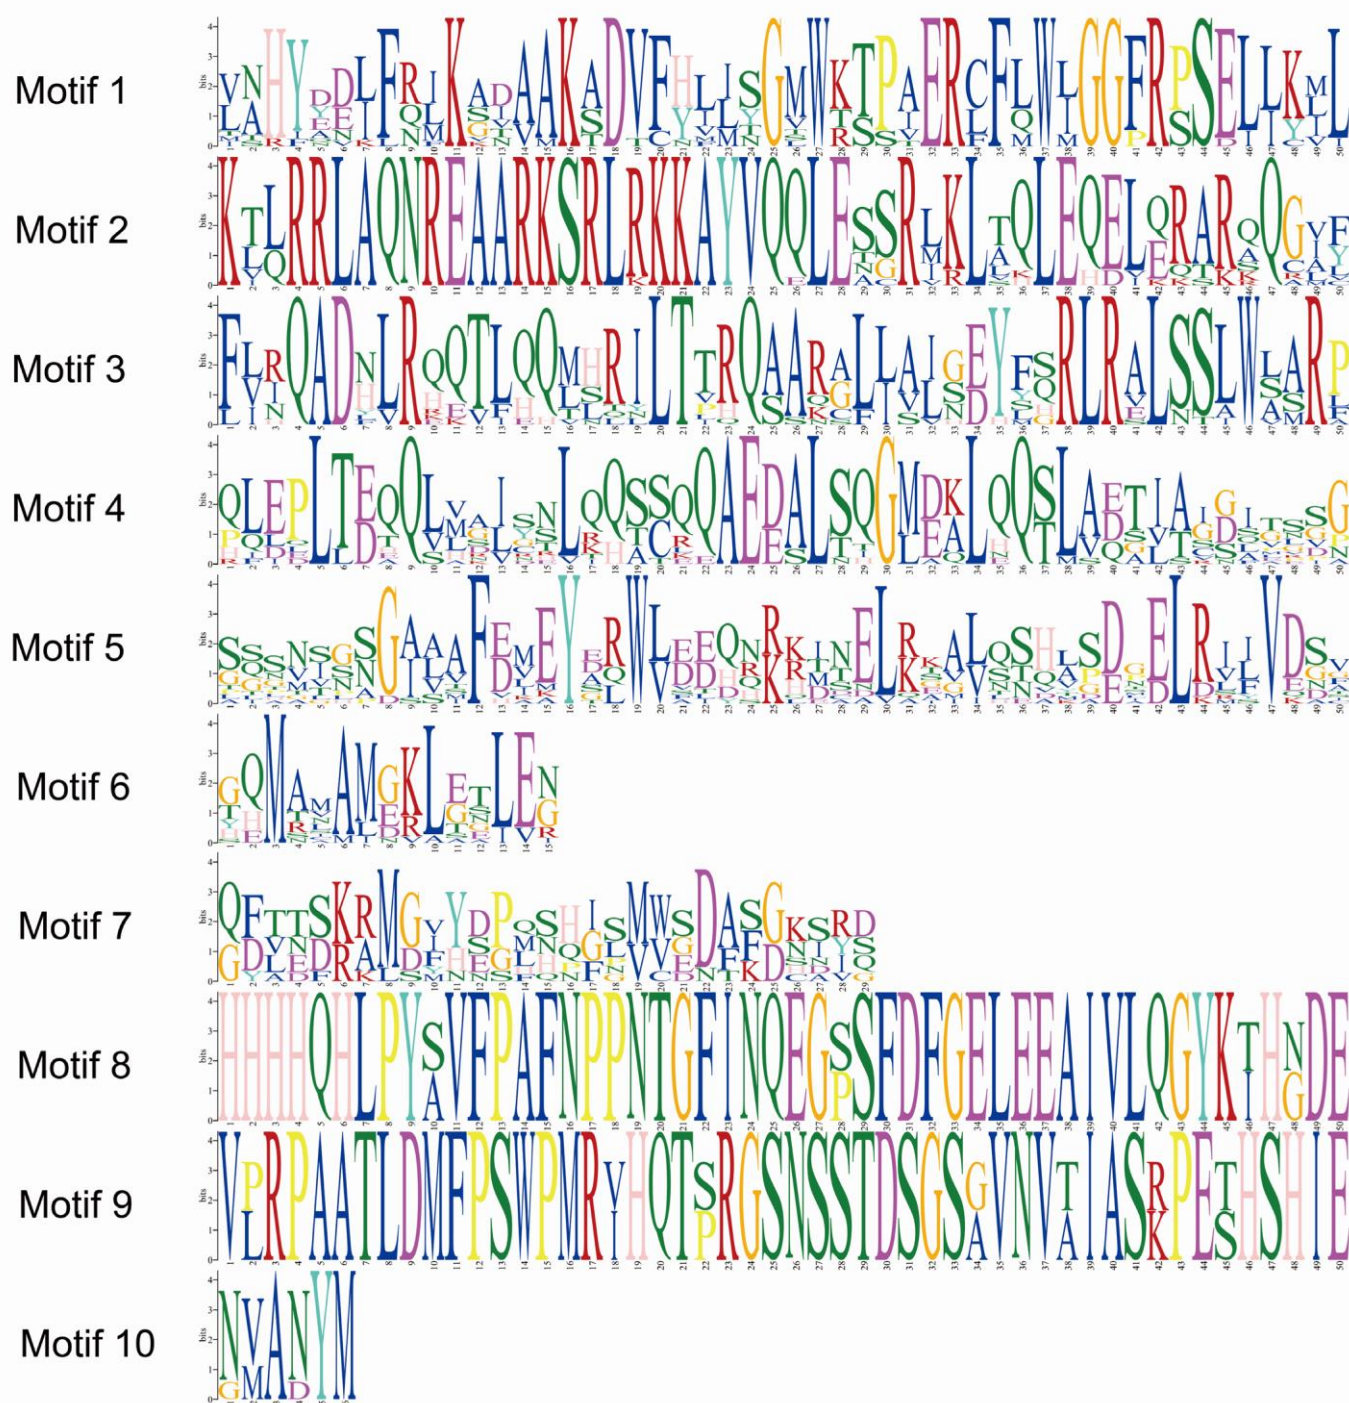

Figure S2. Visualization of conserved motifs within sunflower TGA proteins. Each logo consists of stacks of letters, with each letter representing an amino acid. The total height of the stacks at a specific position reflects the degree of conservation across the analyzed sequences. The height of an individual letter within the letter stacks indicates the relative frequency of the corresponding amino acid at that position.

Figure S3. In Silico prediction of 3D structures for TGA proteins in sunflower. The predicted tertiary structures of TGA proteins from sunflowers were generated through AlphaFold computational modeling. As a schematic representation of the HaTGA01 domain, showing the flexible N-terminus (yellow dashed box), the bZIP domain (green dashed box), and the C-terminus, encompassing a putative Delay of Germination 1 (DOG1) domain (red dashed box). (pLDDT, AlphaFold per-residue confidence score).

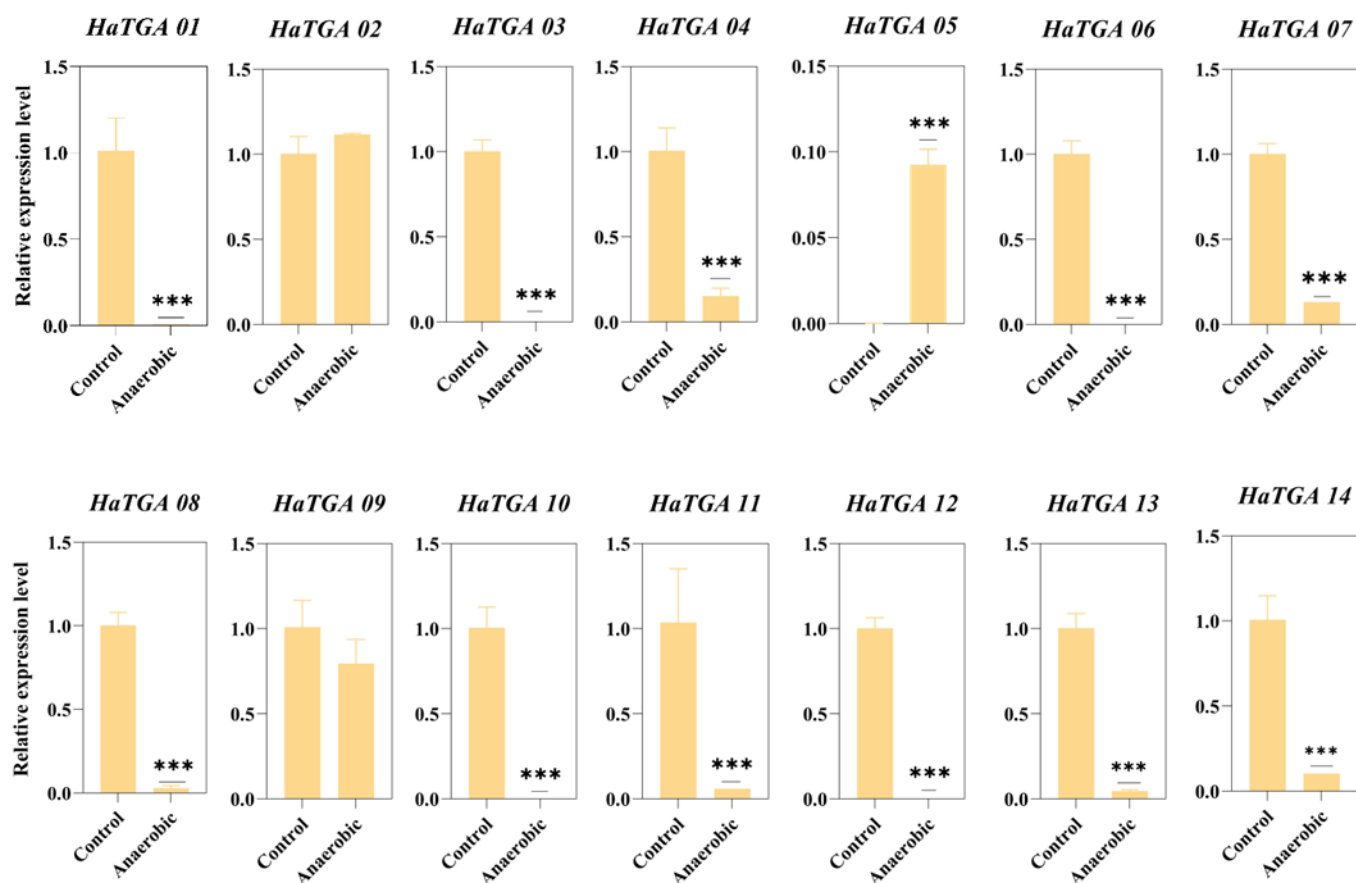

Figure S4. Expression profiles of *HaTGA* genes under anaerobic induction. The relative expression levels were calculated using the $2^{-\Delta\Delta C_t}$ method and compared with that of *HaTublin*, with three replicates. The values represent the means and standard deviations obtained from three biological replicates. The asterisks indicate statistical significance (***) $P < 0.001$ compared to the corresponding control.

Table S1. Molecular characteristics of TGA in 13 plant species.

Gene ID	Rename	Number of Amion Acids	MW(Da)	PI	Instability Index	Aliphatic Index	Grand Average of Hydropathicity
