<sup>1</sup> number of replications; <sup>2</sup> only the EPG recordings that included a particular waveform were included in calculations; np – no probing (aphid stylets outside the plant tissues); C – pathway activity (extracellular stylet penetration with potential drops, i.e., short cell punctures); F – derailed stylet activities (difficulties in penetration); G – xylem phase (ingestion of xylem sap); E – phloem phase including E1 (phloem salivation) and E2 (phloem sap ingestion); E2 > 10 min. – sustained ingestion of phloem sap.
