Keywords: NBS, 1*H*-pyrazolo[4,3-*e*][1,2,4]triazine.

As part of our research programme we have synthesized the title compounds as valuable intermediates for the preparation of acyclonucleosides-biologically active molecules. The starting material **1** was obtained according to the reported procedure [1] and title compounds were obtained using N-Bromosuccinimide (NBS) as brominating agent.

To a solution of **1** (72 mg, 0.25 mmol) in CCl_4 (10 ml) NBS (178 mg, 1mmol) and Azobis(isobutyronitrile) (AIBN) (17 mg, 0.1 mmol) were added. The mixture was refluxed for 4.5 h. The solvent was evaporated *in vacuo* and the residue was purified by column silica gel chromatography (silica gel 230-400 mesh, $\text{CHCl}_3/\text{n-hexane}$ mixture 1:1) to give 99 mg (0.27 mmol, 54%) of **2** and 63 mg (0.14 mmol, 28%) of **3**.
