

Supplementary information

Supplementary Figure S1.

Cytotoxicity of SHE and fractions on RAW 264.7 macrophages. RAW 264.7 cells exposed to the indicated concentrations of SHE and different fractions for 24 h, and cell viability was measured at 570 nm using the MTT assay. Treatment concentrations of each sample were 0, 6.25, 12.5, 25, 50, 100, 200, 400 μg/mL. Different letters on the point indicate a significant difference (p<0.05)

Supplementary Table S1. List of the primers used in the present study.

Gene	Forward (5'→3')	Reverse (5'→3')
<i>Rpl32</i>	CAC CAG TCA GAC CGA TAT	TTC TCC GCA CCC TGT TG
<i>Tnf</i>	GGC TGC CCC GAC TAC GT	ACT TTC TCC TGG TAT GAG ATA GCA AAT
