

Text S1. Interview guide:

1. Can you briefly tell us your name, what part of the country you practice in and how many years you have been in practice ?
2. How do most of these women end up at your clinic (explore referral patterns) ?
3. Do you communicate with the women's other health-care providers?
4. When women come in to see you, how do you design your treatment plan ? (explore sources of knowledge here as well)
5. What frequency of treatment do you normally use ? are there any barriers to this ?
6. What do you do to keep your knowledge of women's health up to date ?
7. How valuable are academic articles such as randomised controlled trials for your practice ? Do they influence your practice at all ? Why/ Why not?
8. Is there anything that would help make research results easier to translate into your clinical practice ?
