\*Proportion with the outcome \*\* For comparison, the same variables were adjusted for in each of the three violence outcome analyses (any recent physical or sexual violence; any physical or sexual violence by an intimate partner; any recent physical or sexual violence by a non-intimate partner. Model 1 models adjusted for age, and number of ACEs. Model 2 models adjusted for level 1 variables, and sexual debut. Model 3a models were adjusted for level 1 and 2 variables, along with level 3a variables shown in the Table. Model 3b models were adjusted for level 1 and 2 variables, along with level 3b variables shown in the Table. Model 3c models were adjusted for level 1 and 2 variables, along with level 3c variables shown in the Table. \*\*\*Adjusted Wald Test. Where variables were ordered categorical, we show the Test for Trend.
