*Figure SI. Comparative illustration to track the mineralogical changes in the residual samples after leaching. Calcite, dolomite, Fe-dolomite, and pyrite were completely removed using the traditional leaching chemicals. The TOC, which was measured via Leco Analyzer, recorded remnants in A1 sample and A2 samples. Chlorite dissolution was incomplete in the two uppermost samples from D1. The phases that did not dissolve were quartz, plagioclase, K-feldspar, illite, and anatase.*

*Figure S2 Ternary plots for mineralogical proportions of the samples*

*Fwk = Quartz + Feldspar; Clay = Total Clay Minerals + Mica; Carb = Calcite + Dolomite + Fe-Dolomite*
