

# Supplementary Material 1

## Model parameters and Priors

Table S1 gives parameter values for fixed parameters. Table S2 gives the prior distribution for estimated parameters. Note that we estimate  $\beta$ ,  $p$ ,  $\kappa_M$ ,  $s$  and  $\phi$  in logarithmic space. For example, the estimated ranges of  $\log_{10}(\beta)$  were (-8, -4) from literature, which indicate the estimated ranges of  $\beta$  were  $(10^{-8}, 10^{-4})$ . We set the priors which allow us to explore a wide range of biological plausible parameter values.

Par.	Description	Values [Refs]	Unit
$g$	Epithelial cell regrowth rate	0.8 [1, 2]	/day
$\gamma_E$	Maximal stimulation rate of naive CD8 T cells	10 [2]	/day
$E_{50}$	Half-maximal stimulating viral titer for CD8 T cells	1e+4	$[u_V]$
$n_E$	Number of effector T cell division cycle	5 [2]	division
$\tau_E$	Total proliferation time of CD8 T cells	8 [2]	day
$\phi_E$	Activation rate of matured CD8 T cells	1.4e+3 [2]	/day
$\delta_E$	Decay rate of CD8 T cells	0.57 [2]	/day
$\kappa_E$	Lysing rate of infected cells by CD8 T cells	5e-5 [3]	/day/cell
$\gamma_B$	Maximal stimulation rate of naive B cells	6e-2 [2]	/day
$B_{50}$	Half-maximal stimulating viral titer for B cells	6e-2	$[u_V]$
$n_B$	Number of B cell division cycle	5 [2]	division
$\tau_B$	Total proliferation time of B cells	8 [2]	day
$\phi_P$	Activation rate of matured plasma cells	8 [2]	/day
$\delta_P$	Decay rate of plasma cells	0.5 [2]	/day
$\mu_S$	Production rate of short-lived antibody	12 [1, 2, 3]	$[u_A]$ /cell/day
$\delta_{AS}$	Decay rate of short-lived antibody	2 [1]	/day
$\mu_L$	Production rate of long-lived antibody	4 [3]	$[u_A]$ /cell/day
$\delta_{AL}$	Decay rate of long-lived antibody	0.015	/day
$\kappa_{AS}$	Neutralisation rate of virus by short-lived antibody	0.8 [3]	$[u_A]$ /day
$\kappa_{AL}$	Neutralisation rate of virus by long-lived antibody	0.8 [1, 3]	$[u_A]$ /day
$T_{max}$	The maximal number of epithelial cells in the upper respiratory tract	1e+7 [4]	cell

Table S1: **Parameter values for fixed parameters.**  $[\cdot]$  denotes the unit of variables, e.g., the unit of antibody is denoted as  $[u_A]$ , and the unit of virus is denoted as  $[u_V]$ .

Par.	Description	Estimated values from literature [Refs]	Unit	Prior
$\varepsilon_1$	The effect of MUC1 on viral infectivity	-	-	Uniform(0,1)
$\log_{10}(\beta)$	Rate of viral infection	(-8,-4) [4, 5]	/([ $u_V$ ] day)	Normal(-6,-4)
$\delta_I$	Death rate of infected cells	(0.67, 4.8)[4, 5, 6]	/day	Lognormal(log(0.89),1)
$\log_{10}(p)$	Viral production rate	(-6,2)[4, 5, 6]	[ $u_V$ ]/(cell day)	Normal(-2,4)
$\delta_V$	Natural death rate of virus	(4.2, 59)[4, 5, 6]	/day	Lognormal(log(28.4),1)
$\log_{10}(\kappa_M)$	Phagocytosis rate of virus by macrophages	(-6,-3)[7]	/(cell day)	Normal(-6,4)
$\varepsilon_2$	The effect of MUC1 on macrophage recruitment	-	-	Uniform(0,1)
$\delta_M$	Decay rate of macrophages	(1/180,1/150)[7]	/day	Lognormal(log(4.2e-3),1)
$\log_{10}(s)$	Supplementary rate of macrophages	(2.52, 2.63)[7]	cell/(ml day)	Normal(3,1)
$\log_{10}(\phi)$	Recruitment rate of macrophages by infected cells	-	(ml cell)/cell	Normal(0,3)

Table S2: **Priors for estimated model parameters.**  $[\cdot]$  denotes the unit of variables, e.g., the unit of virus is denoted as [ $u_V$ ].
