

Figure S1: Modeling of MPXV-MEV construct and TLR5 receptor using AlphaFold. A) Modeled structure of MPXV-MEV with residues 142-303 (where adjuvants, epitopes and linkers are inserted) in grey highlighted area; B) Predicted LDDT values for positions in MPXV-MEV construct for different models obtained from AlphaFold prediction; C) Sequence coverage map of MPXV-MEV vaccine construct; D) Modeled structure of TLR5 receptor with the predicted LDDT values.

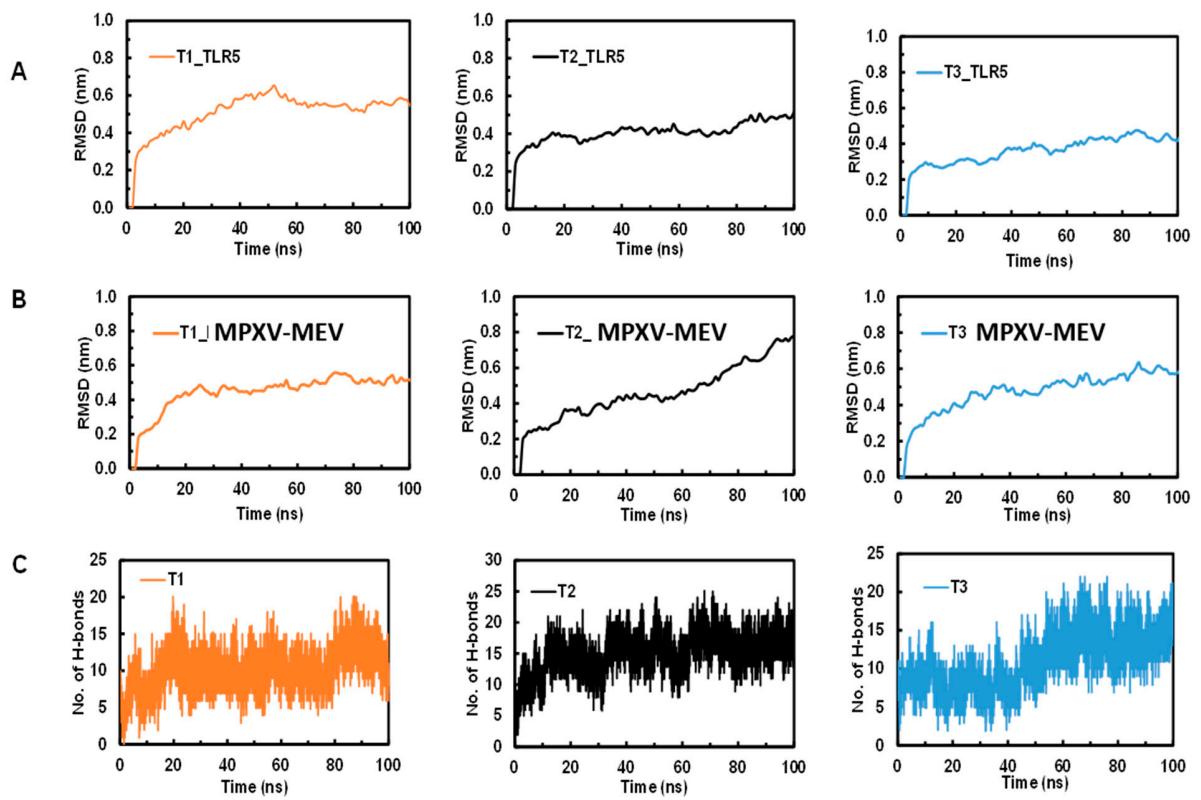

Figure S2: Molecular dynamics simulations results obtained from three independent simulations for Root Mean Square Deviation (RMSD) for A) TLR5 and B) MAXV-MEV. C) Total number of hydrogen bonds between TLR5 and MPXV-MEV.

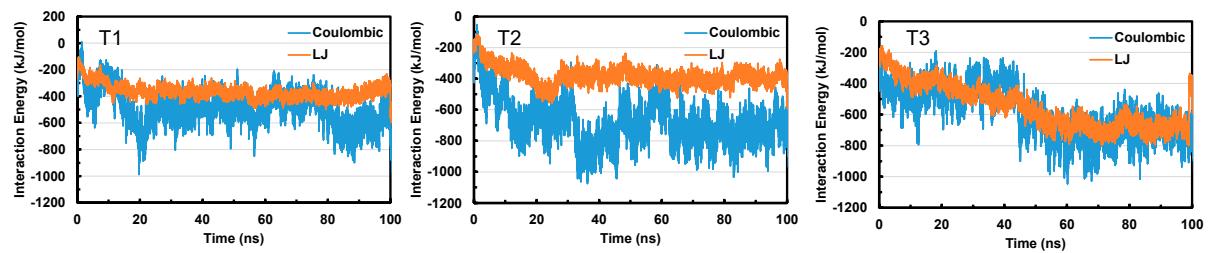

Figure S3: Interaction energy between TLR5 and MAXV-MEV obtained from three independent simulations. Lennard Jones (LJ) and Coulombic interaction energy is shown with orange and blue lines, respectively.

Method for calculating the population coverage:

Default values of the “number of epitopes” and “query by” box were chosen. “World” was chosen for “select area(s) and/or population(s)”. For epitopes RIYFVSLSL and FSIGGVIHL “class II separate” option and for epitopes IYFVSLSL, LKHKYGCSL, AYTSISVVF and RYPIIDIKW “class I separate” option in “select calculation options” were used. Then the epitopes were pasted in the “epitope box”. For MHCII epitopes DRB1_0101, DRB1_0301, DRB1_0401, DRB1_0701, DRB1_0801, DRB1_0901, DRB1_1001, DRB1_1101, DRB1_1201, DRB1_1301, DRB1_1501, and DRB1_1602 alleles were selected and for MHC-1 epitopes HLA-A0101, HLA A0201, HLA-A0301, HLA-A2402, HLA-A260, HLA-B0702, HLA-B0801, HLA-B2705, HLA-B3901, HLA-B4001, and HLA-B5801 alleles were chosen.

Table S1: Prediction of helper T cell epitopes and their antigenicity, allergenicity, toxicity and interferon- γ inducing ability

Table S4: Physiochemical Properties of the MPXV-MEV construct

Number of amino acids	390
Molecular weight	40293.29
Antigenicity	Antigenic (Vaxijen score: 0.5492)
Allergic potential	Non-allergen
Theoretical pI	9.75
Instability index	Stable (36.04)
Total number of atoms	5682
Aliphatic index	92.72
Extinction coefficient	36565
Grand average of hydropathicity (GRAVY)	-0.009
Estimated half-life	>20 hours in yeast, >10 hours in E. coli, and 30 hours in mammalian reticulocytes
