Table S1. Sensitivity of MGF 360-14L real-time PCR compared to that of Tignon real-time PCR assay.
 Total nucleic acid extracted from cell culture amplified ASFV Georgia 2007/1 ten-fold dilutions, was tested by the MGF 360-14L and Tignon real-time PCR assays. 2007/1.

Table S7. Detection of ASFV MGF 360-14L in lymphoid tissues collected from pigs IM inoculated with ASFV-GUS-Vietnam and challenged ON with ASFV Georgia 2007/1. Tignon RT-PCR detected p72 gene that is present in both ASFV Georgia 2007/1 and ASFV-GUS-Vietnam. ASFV MGF 360-14L is present only in ASFV Georgia 2007/1. EC = extraction control. NTC= non-template control. DPI = days post-infection. SMLN = sub-mandibular lymph node. GHLN = gastro-hepatic lymph node. SILN = superficial inguinal lymph node. Note: Only Tignon assay positive tonsil, SMLN, and GHLN were tested by MGF 360-14L RT-PCR. P14 = the contact pig that succumbed to ASF.

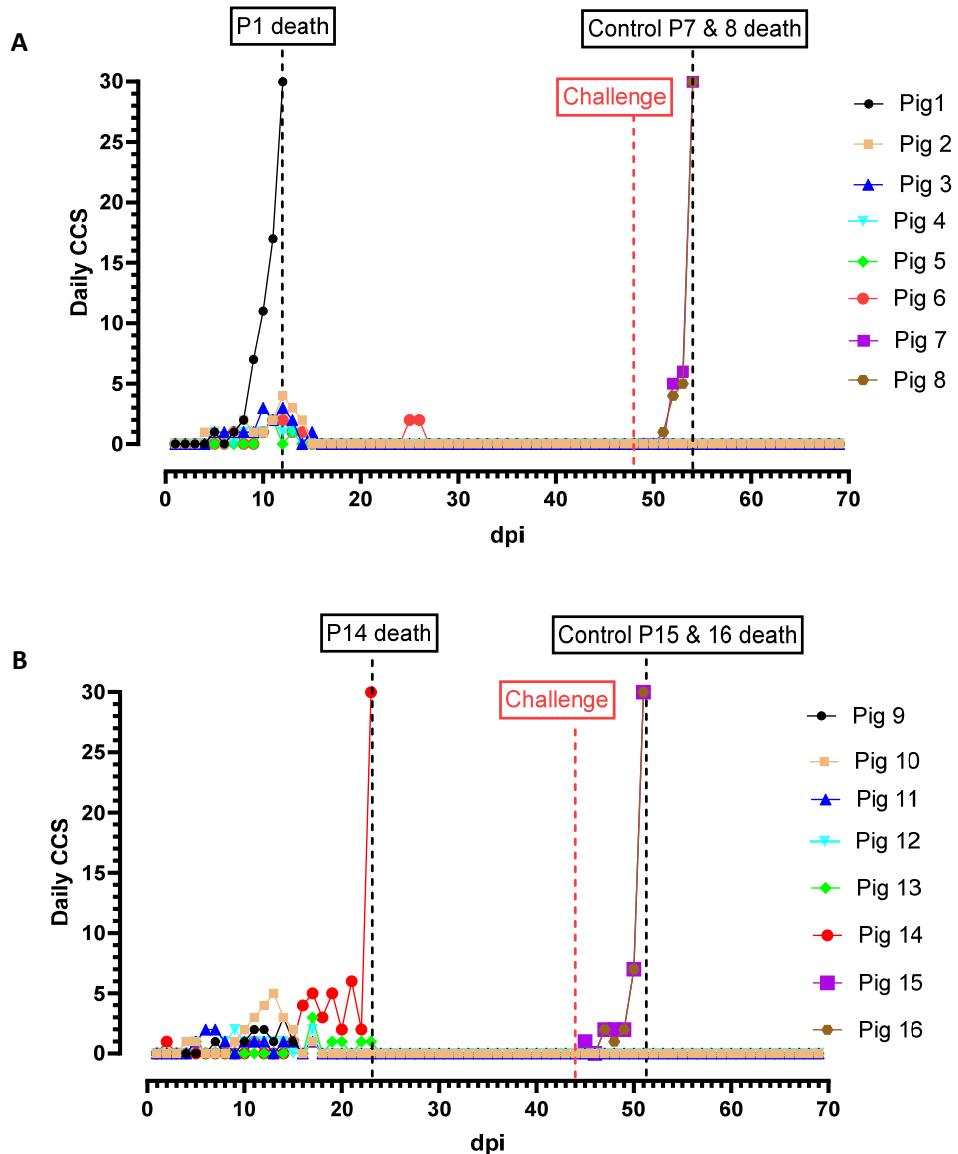

Figure S1: Daily cumulative clinical scores (CCS) of the pig # 1-8 (A) and pig # 9-16 (B). Pig # 1-6 were inoculated with ASFV-GUS-Vietnam ON followed by ASFV Georgia 2007/1 challenge IM. The breed and age matched control pigs (# 7 and 8) were challenged with ASFV Georgia 2007/1 IM. Pigs # 9 – 14 were inoculated with ASFV-GUS-Vietnam virus IM and challenged with ASFV Georgia 2007/1 ON. The breed and age matched control pig # 15 and 16, were challenged with ASFV Georgia 2007/1 ON. When a pig reached the humane end point or found dead, the highest possible CCS of 30 was assigned. dpi = days post-infection
