SUPPLEMENTARY FIGURE S1

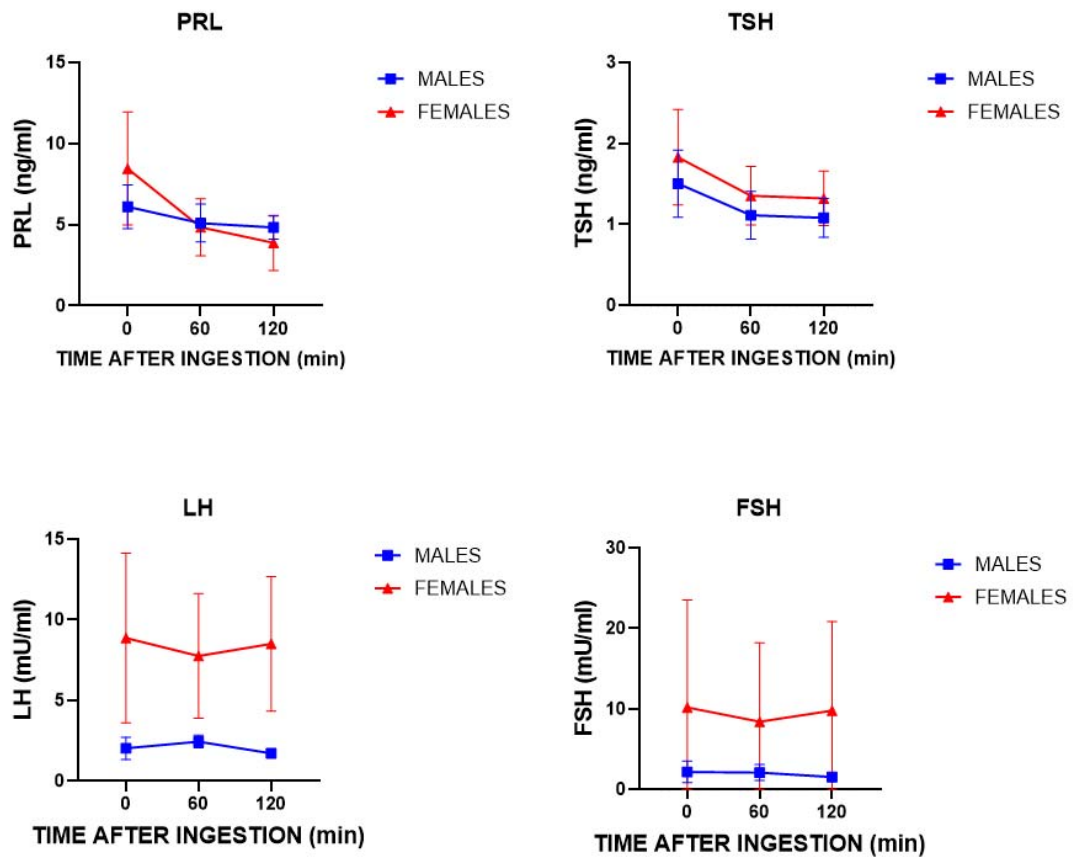

Acute effects on plasma glucagon/insulin ratio in human voluntary subjects of 1) a single oral dose of a glucose solution (50 gr in a 100 ml of water) or 2) a natural carob pod-derived syrup (Innosweet®, 50 gr of carbohydrates in 100 ml water, containing equal amounts of glucose and fructose, and 1600 mg of D-Pinitol). Data are means \pm standard error of the mean of 8 subjects for glucose and 9 subjects for carob syrup. (*) $P < 0.05$, (***) $P < 0.001$ carob syrup *versus* glucose group.

SUPPLEMENTARY FIGURE S2

Acute effect on plasma β -hydroxybutyrate and plasma ketone levels levels in human voluntary subjects receiving 1) a single oral dose of a glucose solution (50 gr in a 100 ml of water) or 2) a natural carob pod-derived syrup (Innosweet®, 50 gr of carbohydrates in 100 ml water, containing equal amounts of glucose and fructose, and 1600 mg of D-Pinitol). Data are means \pm standard error of the mean of 8 subjects for glucose and 9 subjects for carob syrup.

SUPPLEMENTARY FIGURE S3.

Acute effect in human voluntary subjects of a single oral dose of a natural carob pod-derived syrup (Innosweet®, 50 gr of carbohydrates in 100 ml water, containing equal amounts of glucose and fructose, and 1600 mg of D-Pinitol) on plasma pituitary hormones in male and randomly cycling female human subject: Prolactin (PRL), Thyroid-stimulating hormone (TSH), Follicle-stimulating hormone (FSH) and Luteinizing hormone (LH). Data are means \pm standard error of the mean of 9 subjects for carob syrup.

SUPPLEMENTARY FIGURE S4

Acute effects a single oral dose of a natural carob pod-derived syrup (Innosweet®, 100 mg/ml, dissolved in 1 ml of water) or 1 ml of water (Control), in animals food deprived for 18 hr. Data are means \pm standard error of the mean of cumulative food intaken along a period of 4 hr (8 animals for control group, 9 subjects for carob syrup).

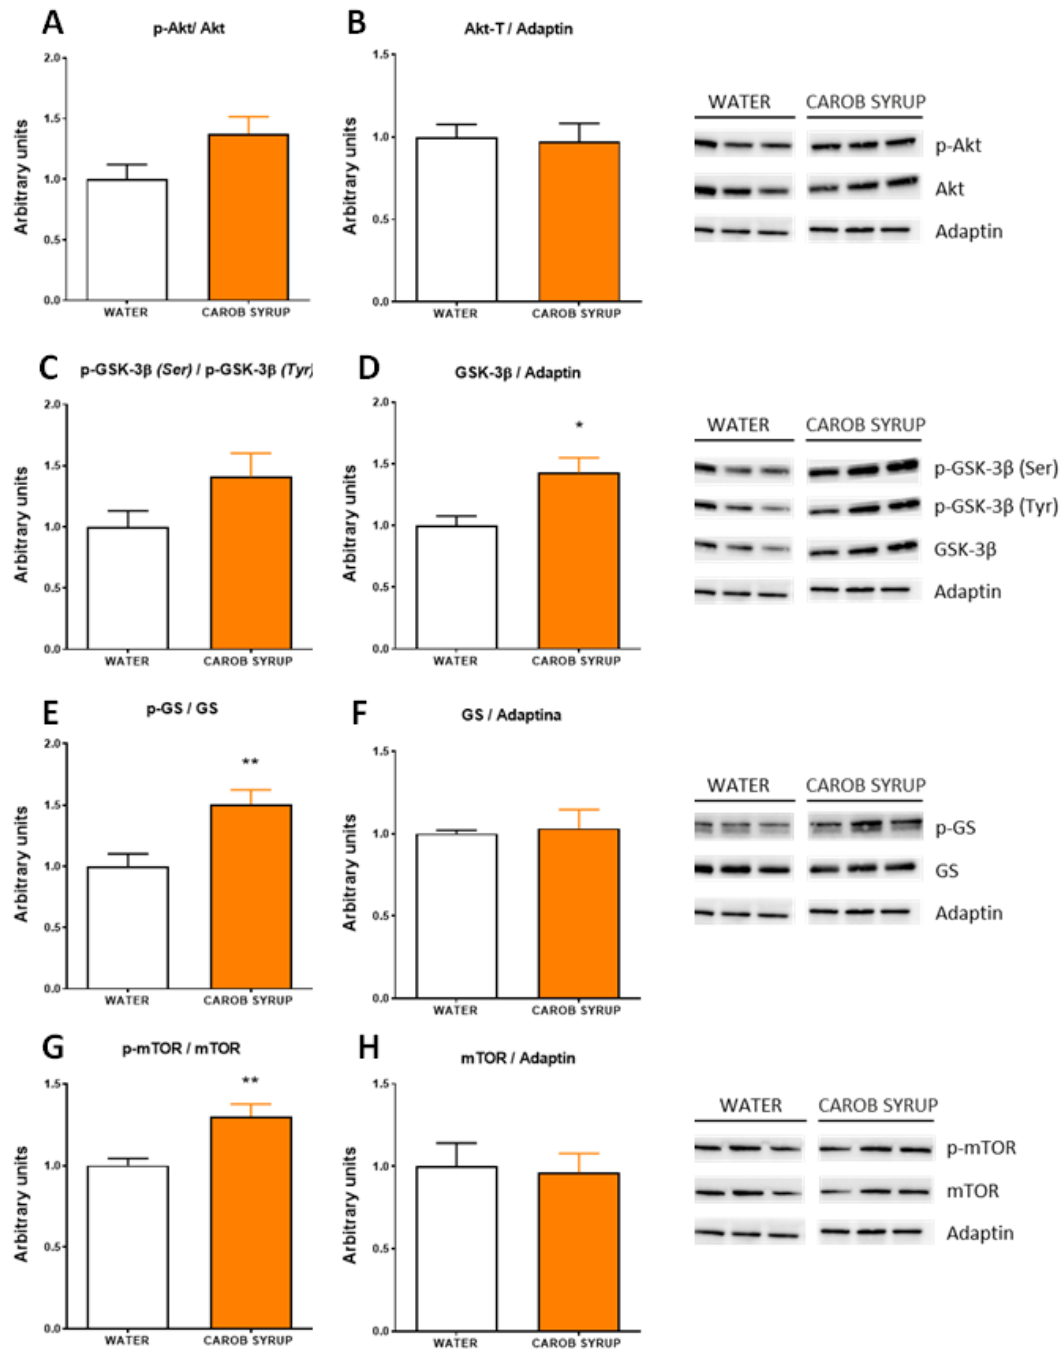

Supplementary Table S2. Plasma and Liver Biochemistry Parameters after 10 days of drinking **water** , or water-diluted **D-Pinitol** (equivalent to 100 mg/kg b.w. /day of D-Pinitol).

	Water	D-Pinitol
N	10	10
Glucose (mg/dl)	247.0 \pm 63.8	269.4 \pm 46.3
Creatinin (mg/dl)	0.57 \pm 0.38	0.70 \pm 0.10
Urea (mg/dl)	21.6 \pm 3.2	41.8 \pm 2.8 (*)
Bilirubin (mg/dl)	0.10 \pm 0.09	0.10 \pm 0.02
Uric Acid (mg/dl)	1.67 \pm 0.29	1.90 \pm 0.17
Triglycerides (mg/dl)	146.9 \pm 30.1	131.1 \pm 9.39
β -Hydroxy butirate (mg/dl)	1005 \pm 86	1057 \pm 90.8
AST (U/L)	152.6 \pm 46.5	254.6 \pm 33.18
Insulin (ng/ml))	14.9 \pm 1.9	14.5 \pm 0.9
Glucagon/Insulin ratio	26.6 \pm 4.9	37.3 \pm 11.9
Leptin (ng/ml)	14.8 \pm 4.6	12.6 \pm 3.4
Ghrelin (ng/ml)	0.42 \pm 0.13	0.53 \pm 0.14
TBARS (Malonyl dialdehyde, μ M)	11.1 \pm 2.7	8.94 \pm 1.09
Total Fat in Liver (mg/g)	40.8 \pm 1.3	30.4 \pm 6.9 (*)
Liver Glycogen (μ g/g)	137.7 \pm 34.1	107.8 \pm 10.6

Data are means \pm Standard Deviation. (*) indicates $p < 0.05$, ANOVA or Kruskal-Wallis test.

AST (Aspartate aminotransferase), TBARS (Tiobarbituric acid reactive species).

SUPPLEMENTARY FIGURE S5.

Effects of repeated administration for 10 days of a carob syrup administered in the drinking water on hypothalamus insulin signaling cascade measured by western blot analysis. (A) Phospho-protein kinase b/AKT (p-AKT), (B) protein kinase b/AKT (AKT), (C) Ratio Serine-phosphorylated glycogen synthase kinase 3 β (p-GSK3 β)(Ser) to Tyrosine-phosphorylated glycogen synthase kinase 3 β (p-GSK3 β)(Tyr)), (GSK3 β)(Ser)/ p-GSK3 β (Tyr)) (D) Total GSK3 β , (E) Phospho-glycogen synthase (pGS), (F) Total Glycogen synthase (GS), (G) Phospho-mammalian target of rapamycin (p-mTOR) and (G) Mammalian target of rapamycin (mTOR). Data are means or adaptin-normalized band densities \pm standard errors of the mean of 5-8 determinations per group. (*) $P < 0.05$, (**) $P < 0.01$ carob syrup *versus* water drinking control animals.
