

Supplementary Figures and Tables

**Safety of repeated administration of xenogeneic human apoptotic state (Allocetra-OTS)
in Sprague Dawley rats**

Figure S1: Average Allocetra-OTS concentration vs. time data following IV administration, linear scale

FIGURE LEGENDS

Figure S1. Average Allocetra-OTS concentration vs. time data following IV administration, linear scale. Biodistribution GLP-study results following single IV administration of Allocetra-OTS to ICR mice. The concentration of Allocetra-OTS in different mouse organs, tissues and body fluids was quantified using a highly sensitive quantitative polymerase chain reaction (qPCR) method based on the quantification of human unique Alu sequences. The analysis results are reported as the relative human to mouse DNA concentration
