

Supplementary Materials

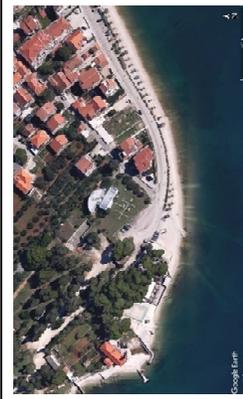

Table S1. The main geographical features of the research area.

| Type of geographical characteristic | Research area geographical information |
|--|---|
| Spatial distribution by countries | Slovenia, Croatia, Bosnia and Herzegovina, Serbia, and Montenegro |
| Latitude | 41.51°N–46.52°N |
| Longitude | 13.23°E–23.00°E |
| Total geographical area (km ²) | 230.387 |
| Population number (in million) | 16.731.211 |
| Capital cities in the research area | Ljubljana, Zagreb, Sarajevo, Belgrade, Podgorica |
| Landscape—mountainous (the Alps and the Dinarides) | North, central, and west Slovenia, west and south Croatia, central and west Bosnia and Herzegovina, northeast Montenegro, west and southwest Serbia |
| Landscape—plain (Pannonian Plain) | Northeast Slovenia, east Croatia, north Bosnia & Herzegovina, north Serbia |
| Landscape—coastal (Adriatic coast) | Southwest Slovenia, west Croatia, southwest Bosnia and Herzegovina, southwest Montenegro |
| Climate—in higher landscape | Alpine or mountainous climate |
| Climate—in lower landscape | Moderate continental climate |
| Climate—coastline | Mediterranean climate |

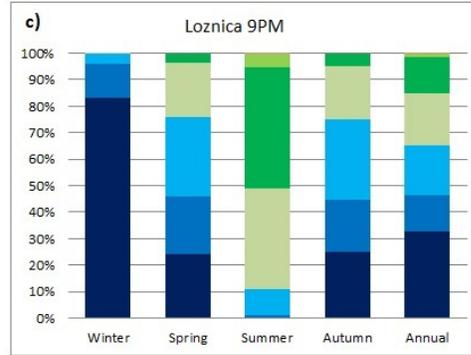

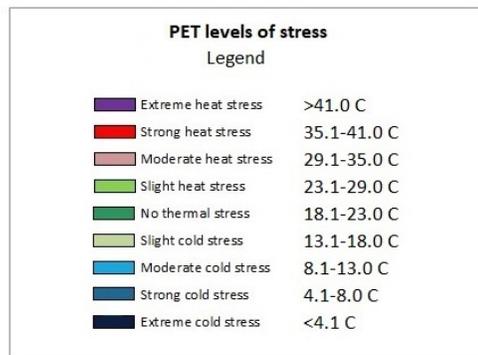

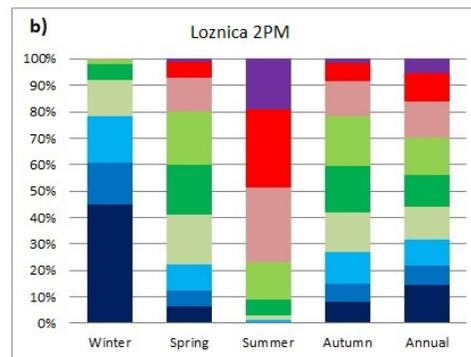

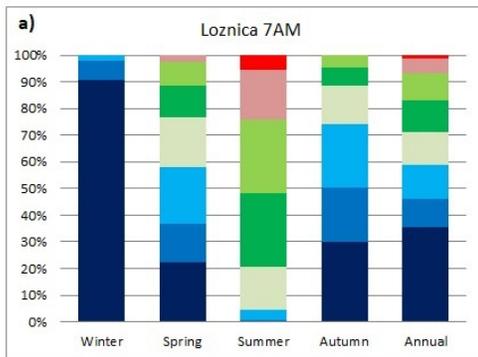

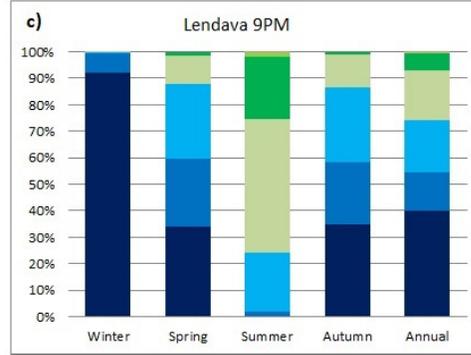

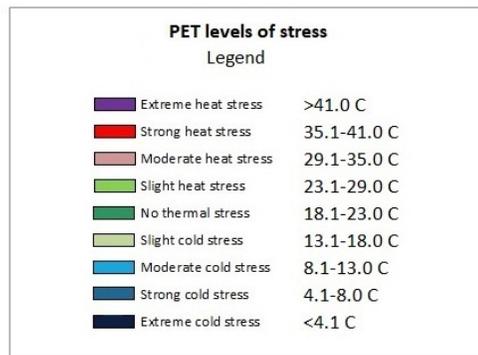

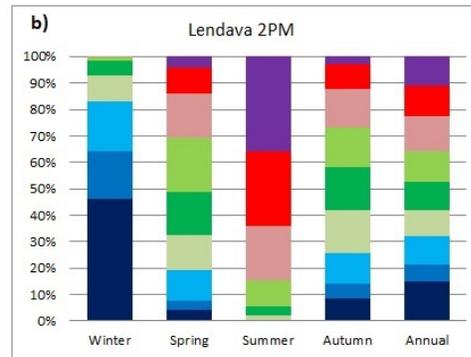

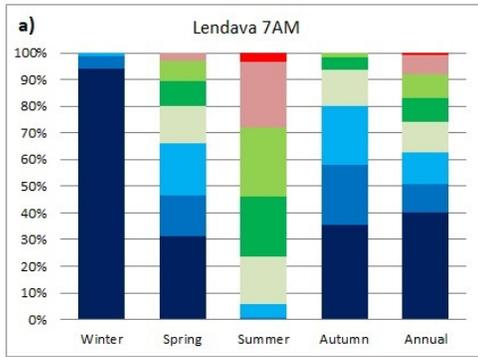

Figure S1. Spatial characteristics of each meteorological station surrounding. Note: Aerial photo background is based on the Google Earth Pro.

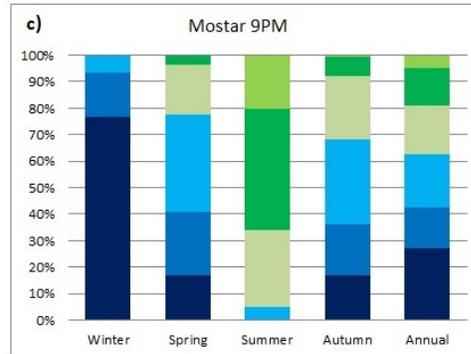

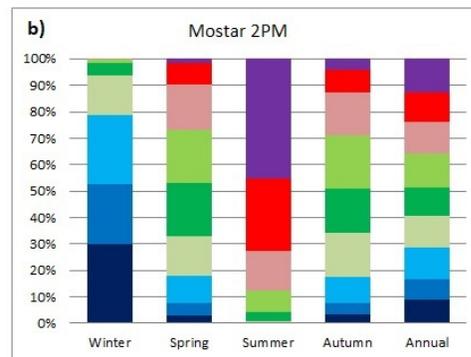

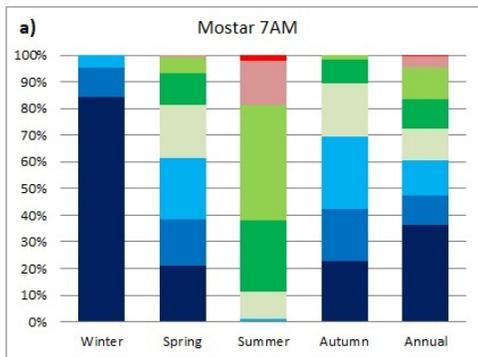

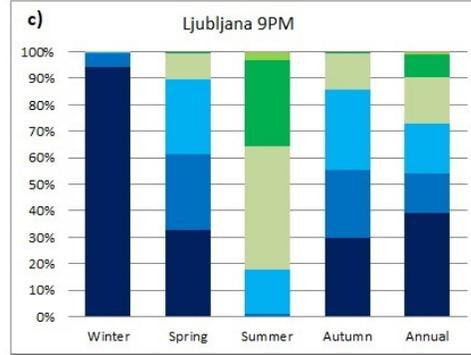

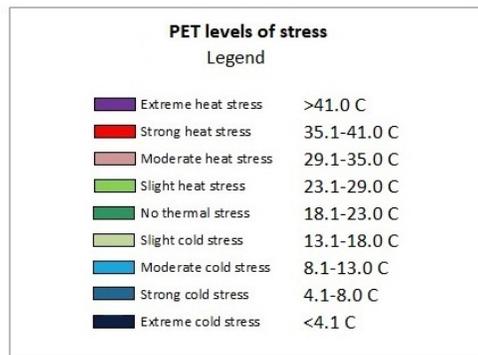

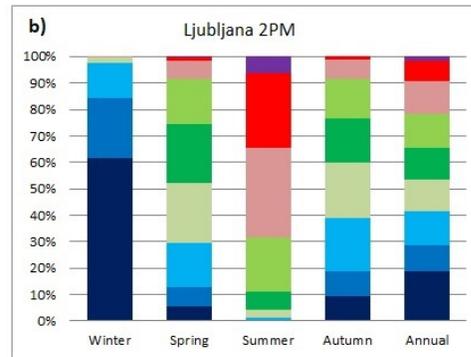

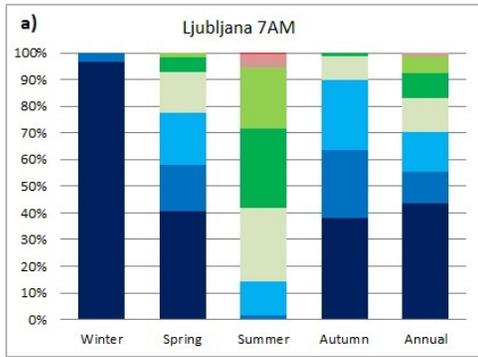

Table S2. Physiological Equivalent Temperature (PET) range for different levels of thermo-physiological stress (Matzarakis and Mayer, 1996).

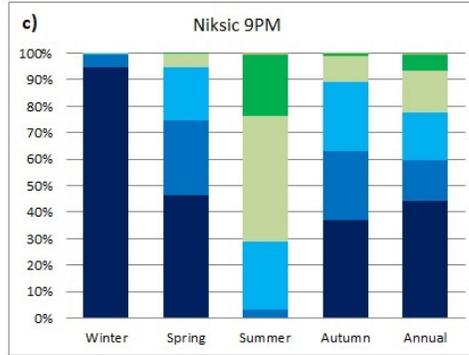

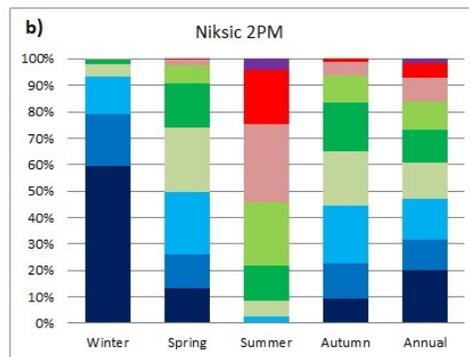

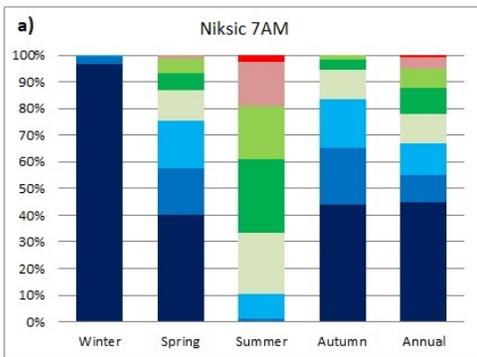

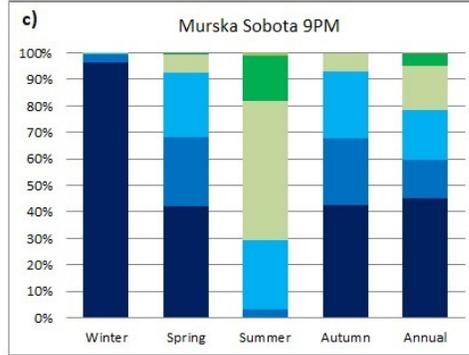

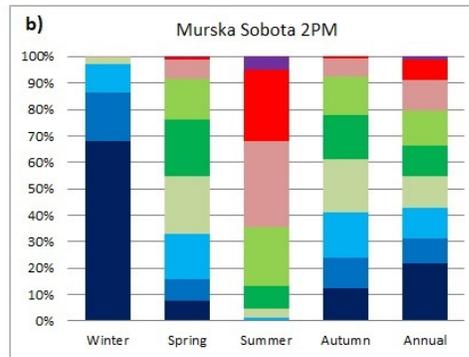

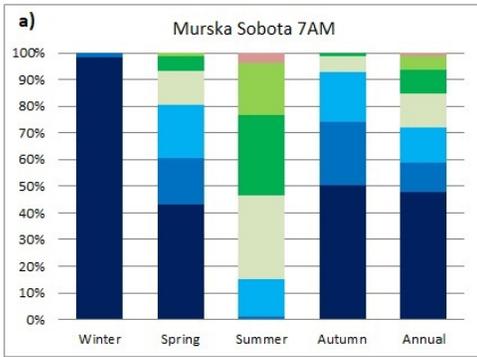

| PET range (°C) | Level of thermal stress |
|----------------|-------------------------|
| > 41.0 | extreme heat stress |
| 35.1– 41.0 | strong heat stress |
| 29.1– 35.0 | moderate heat stress |
| 23.1– 29.0 | slight heat stress |
| 18.1– 23.0 | no thermal stress |
| 13.1– 18.0 | slight cold stress |
| 8.1– 13.0 | moderate cold stress |
| 4.1– 8.0 | strong cold stress |
| < 4.1 | extreme cold stress |

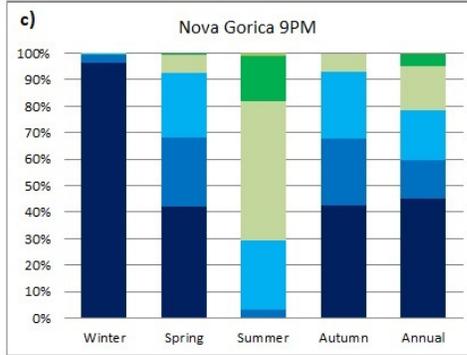

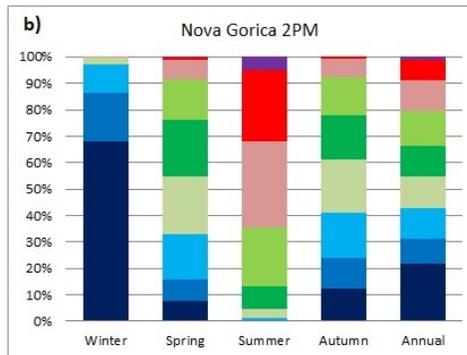

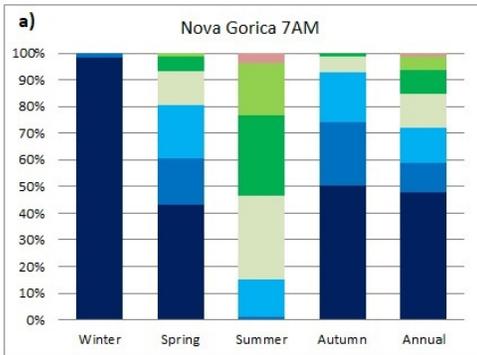

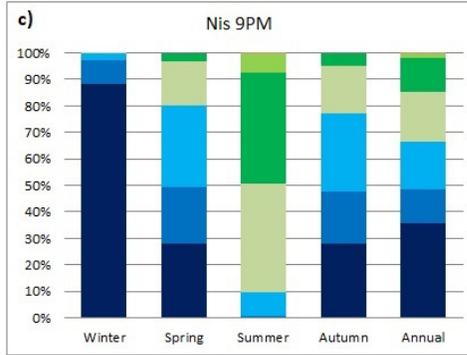

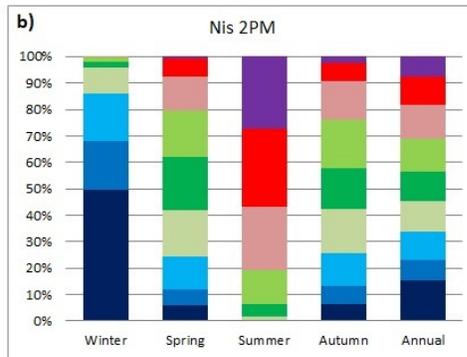

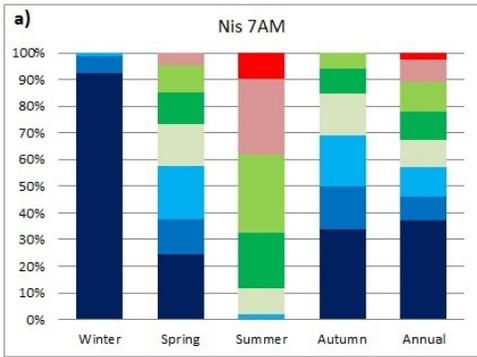

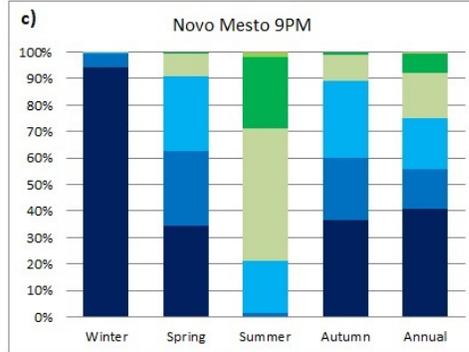

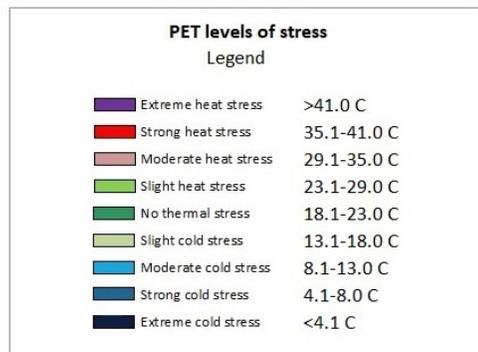

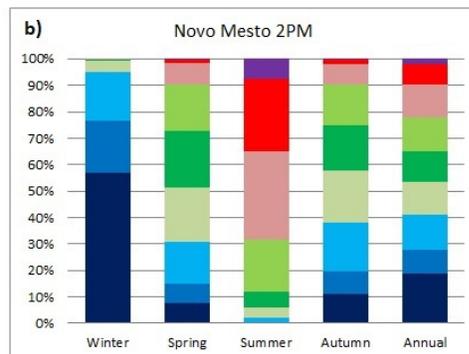

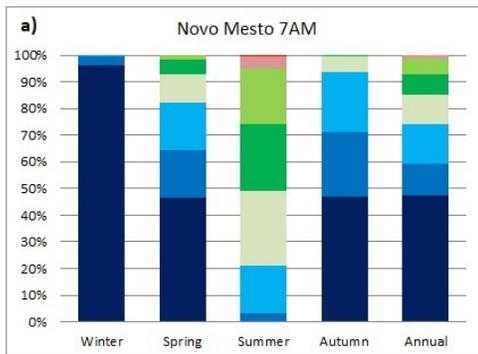

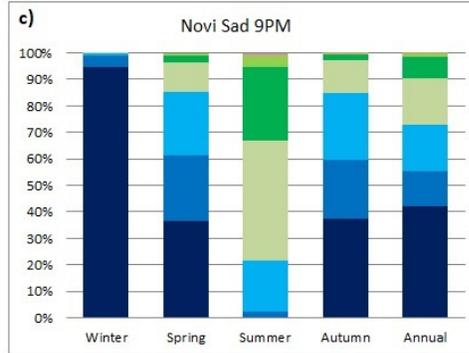

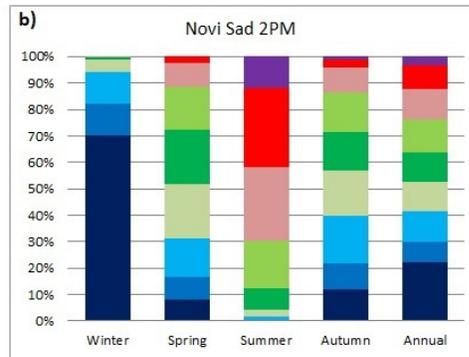

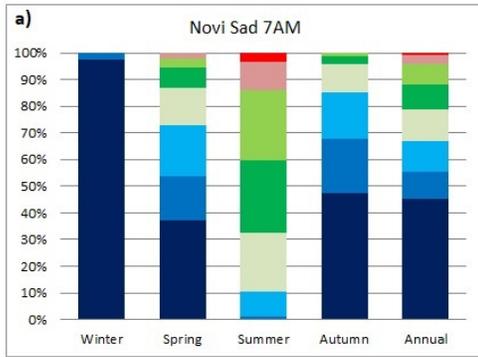

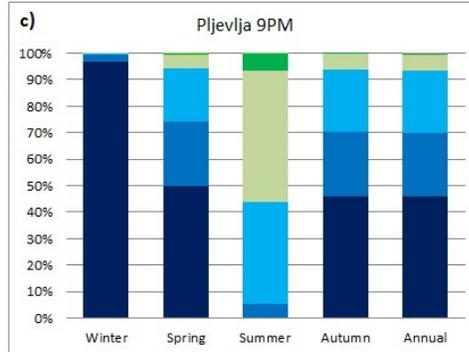

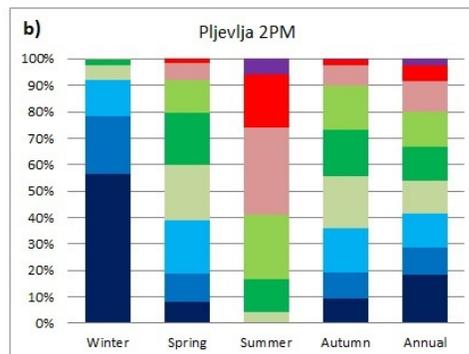

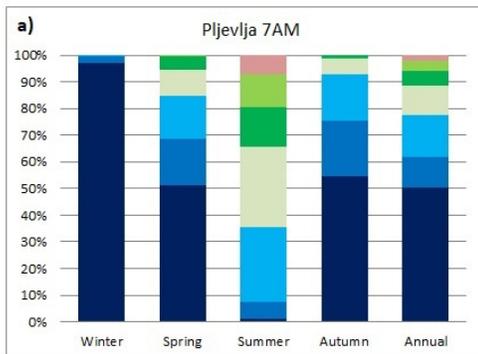

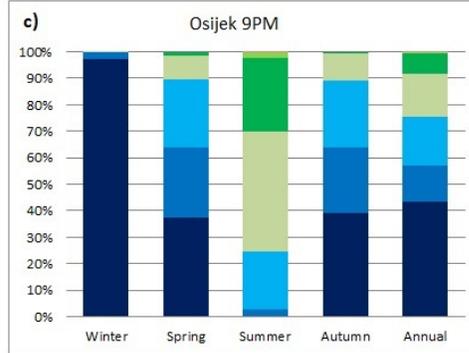

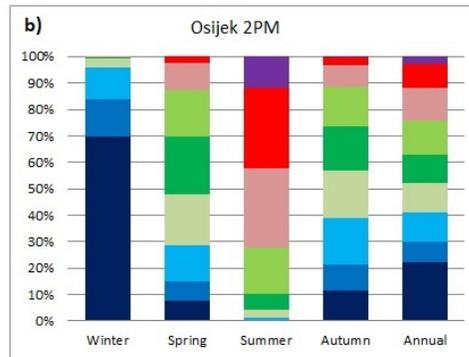

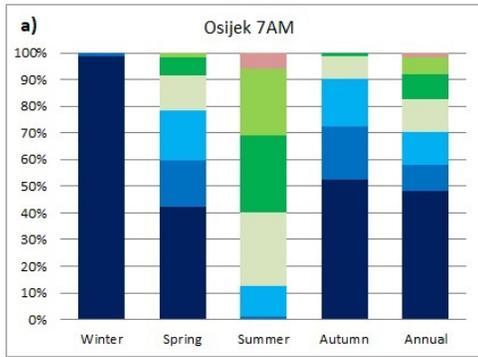

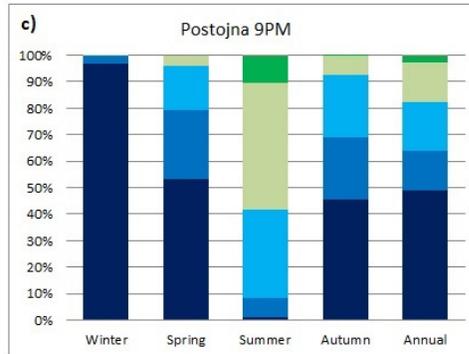

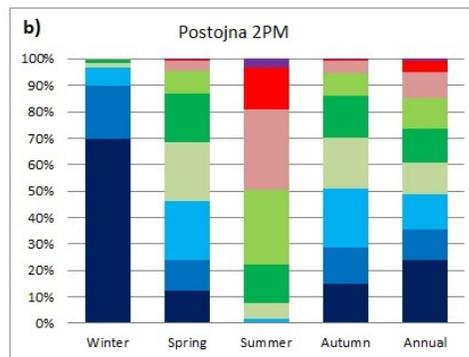

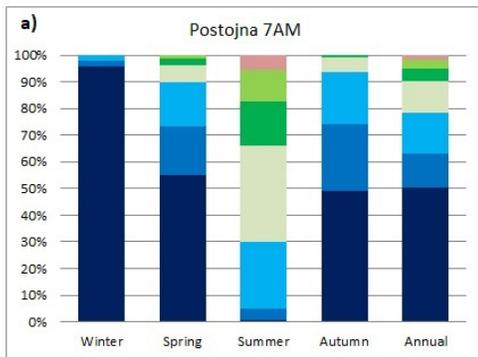

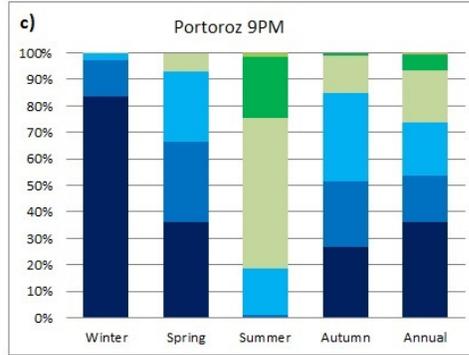

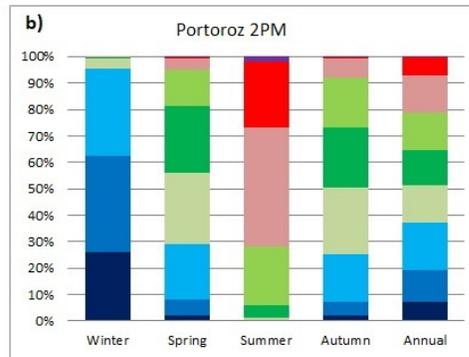

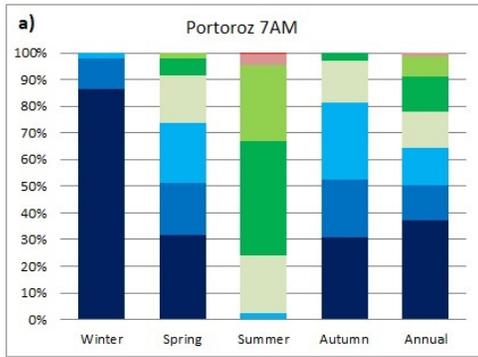

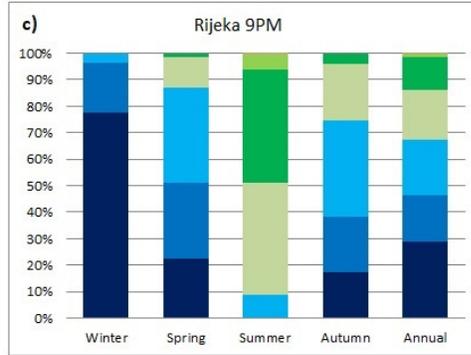

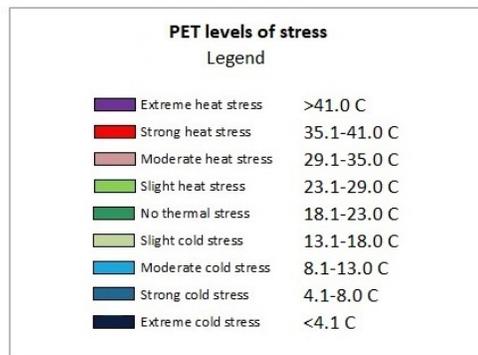

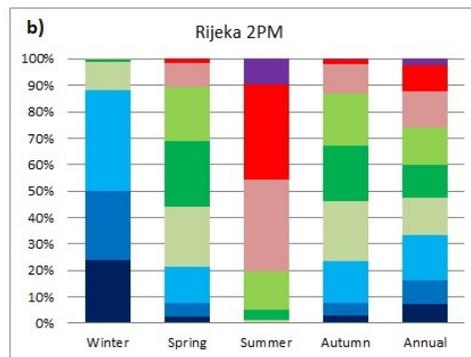

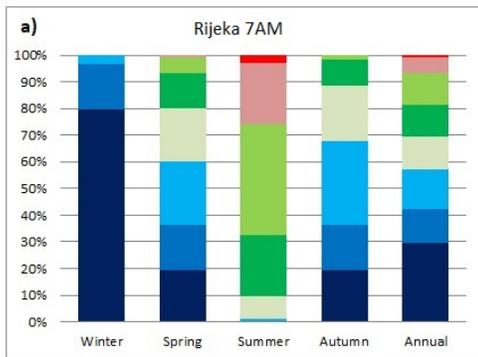

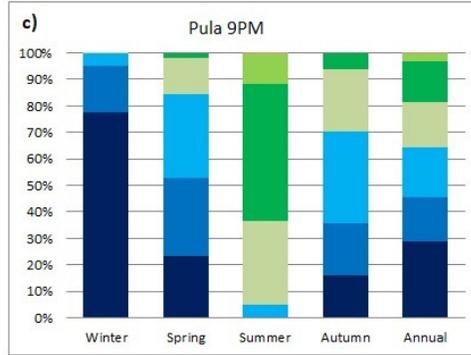

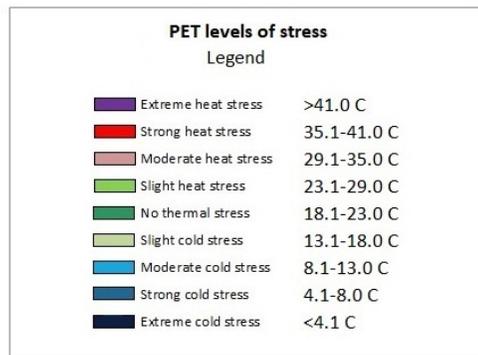

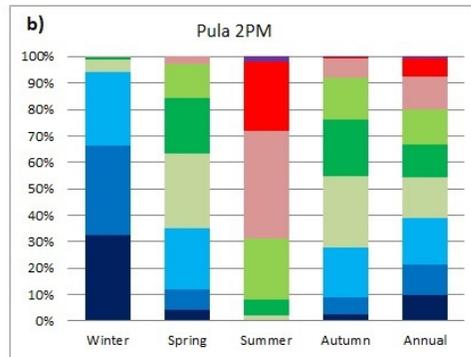

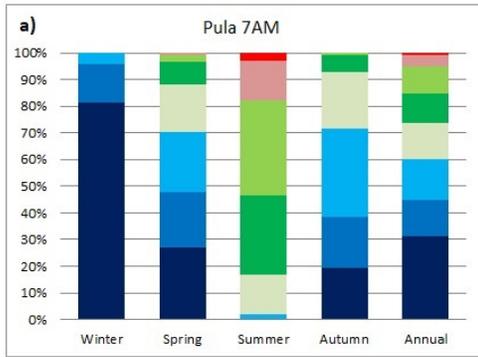

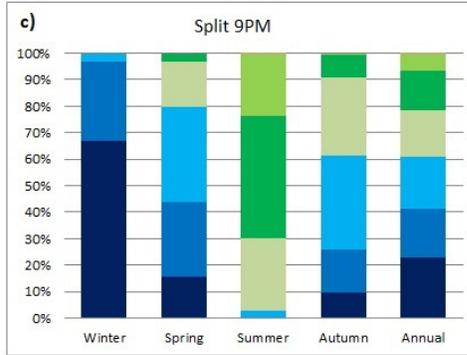

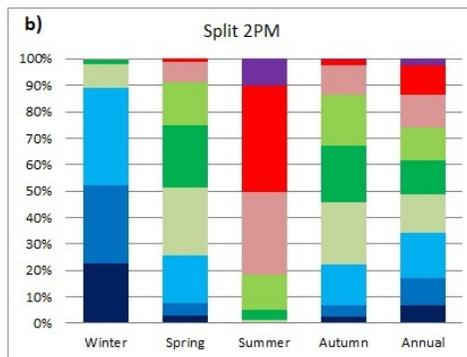

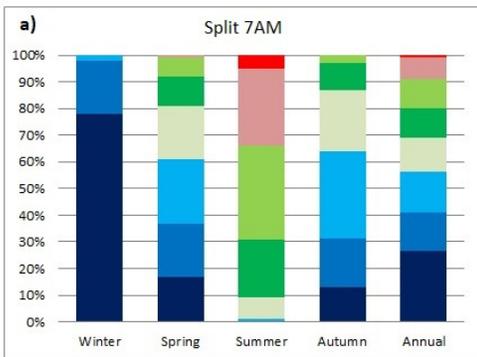

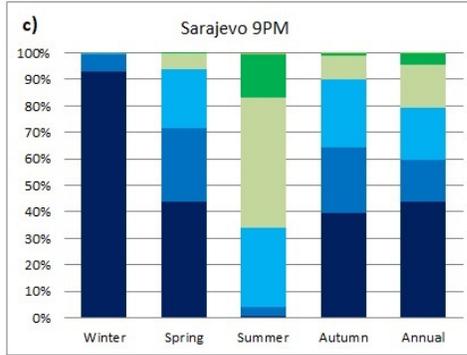

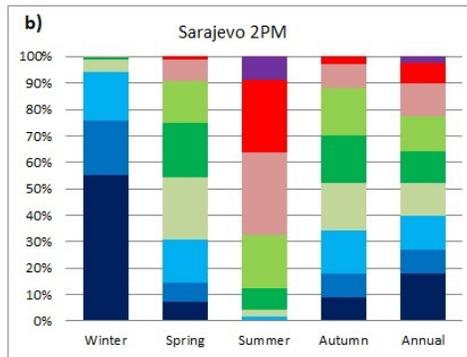

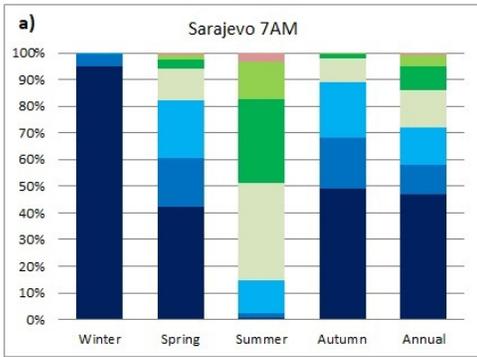

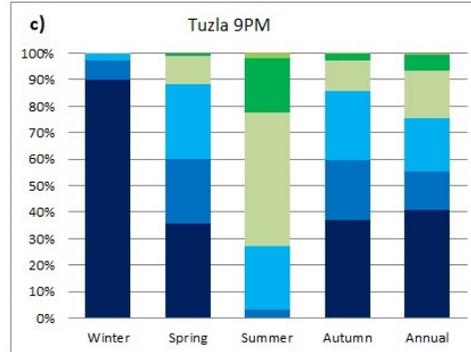

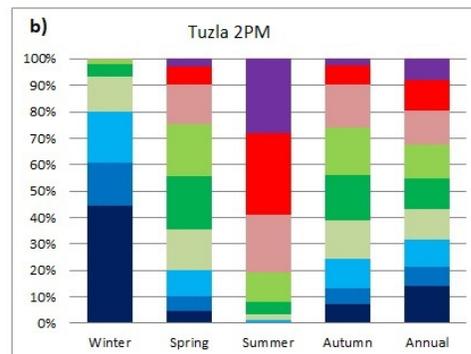

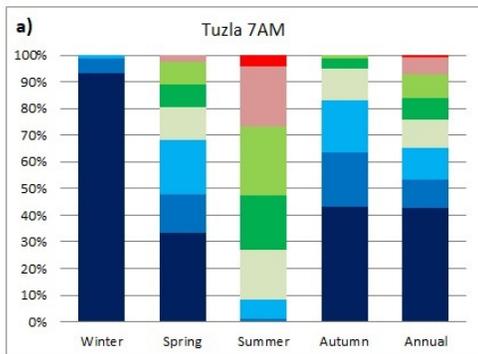

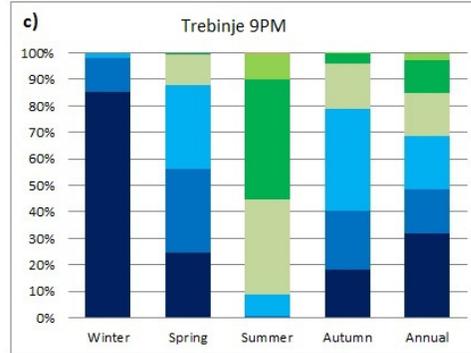

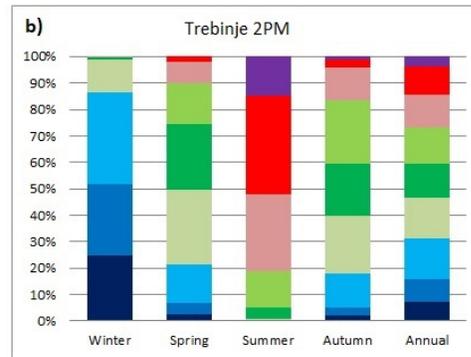

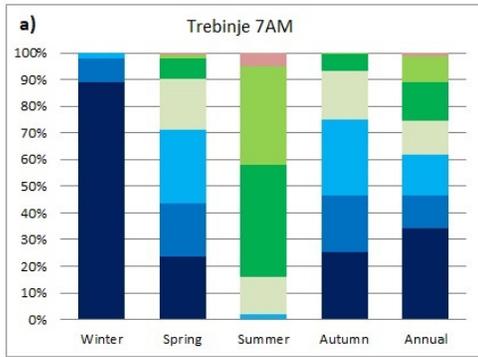

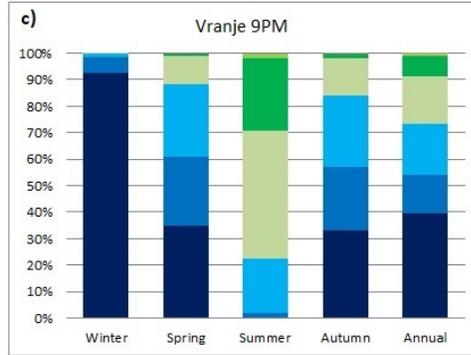

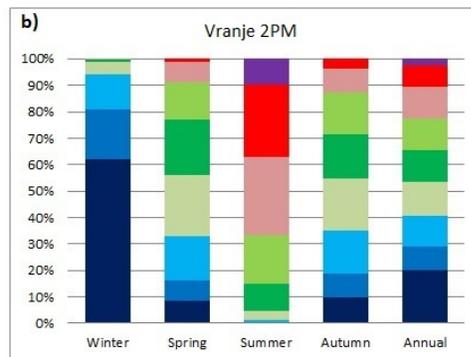

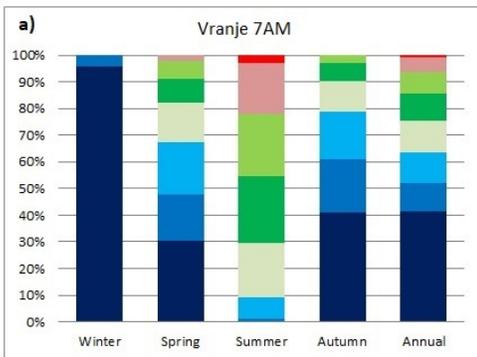

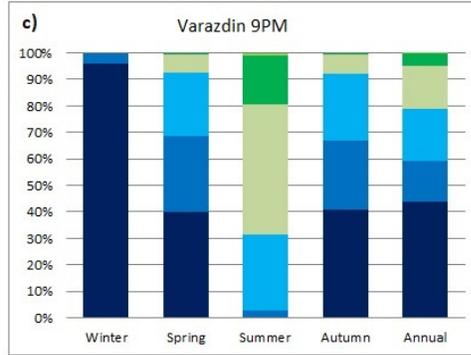

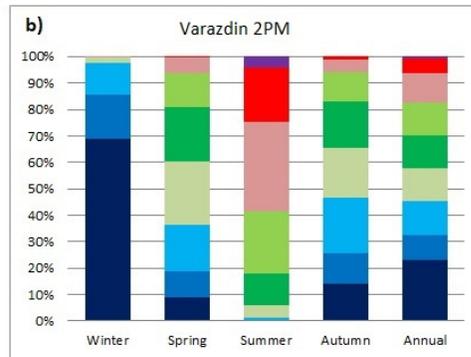

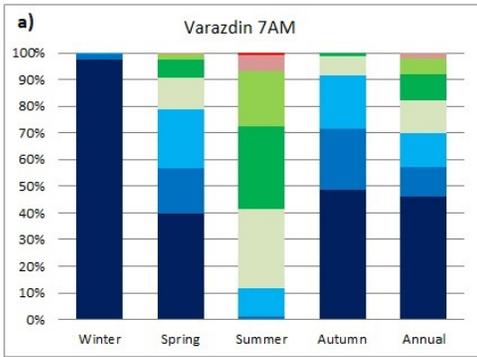

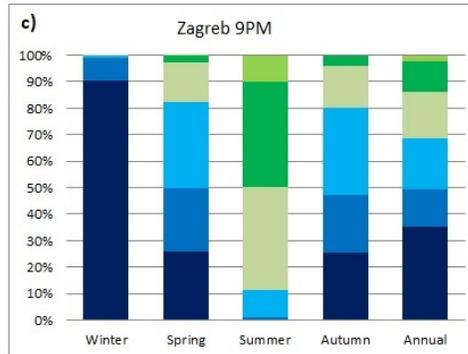

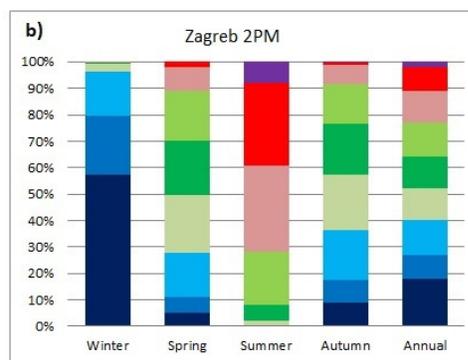

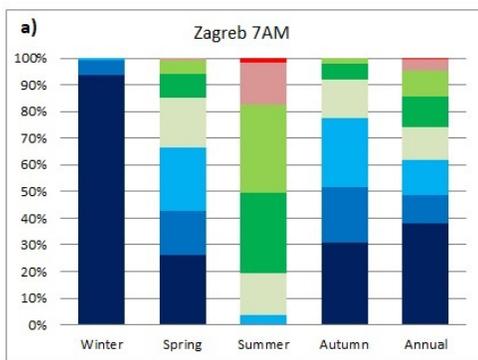

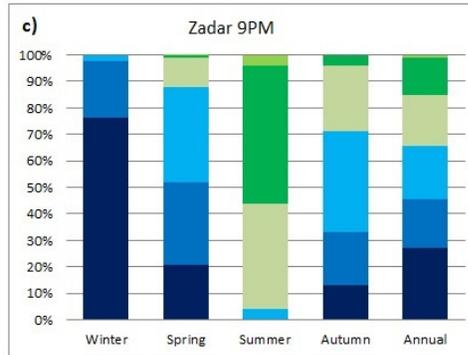

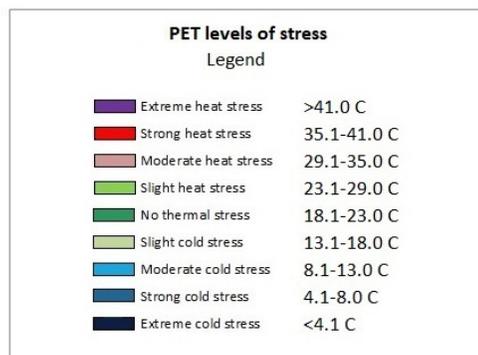

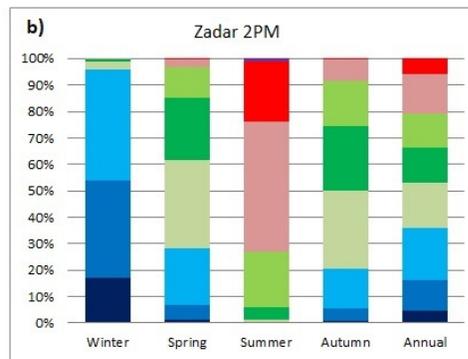

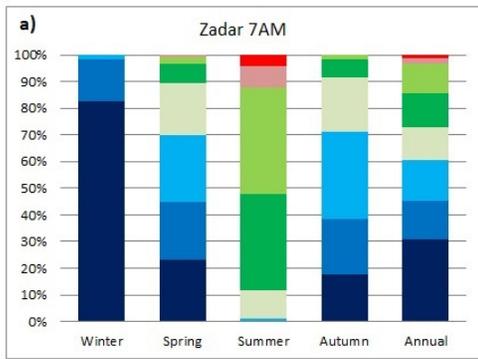

Figure S2. Frequency analysis (in %) of different PET stress levels at a) 7 am, b) 2 pm and c) 9 pm. Note: Measurement stations are arranged in alphabetical order. Belgrade, Podgorica and Zavižan measurement sites are presented and explained in more detail in the main text.

D

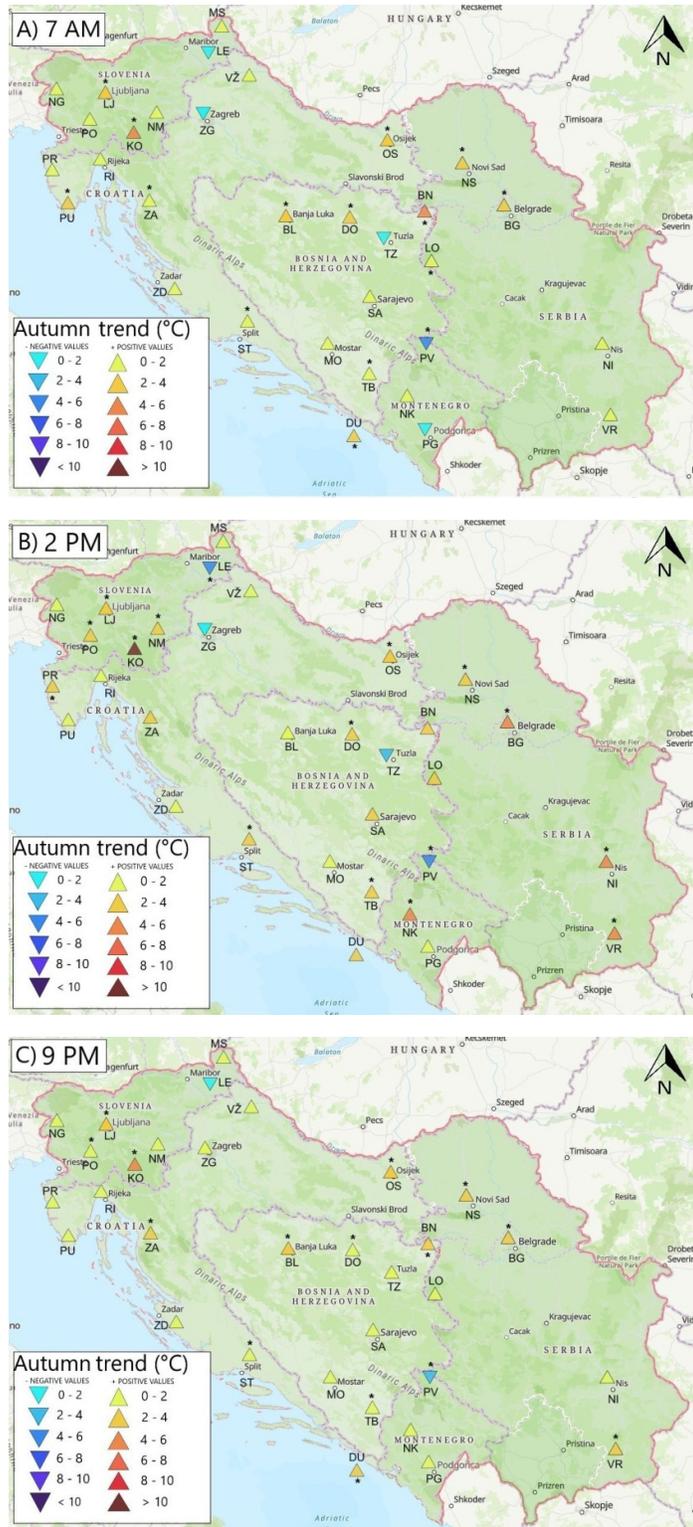

Figure S3. Seasonal (winter (A), spring (B), summer (C), autumn(D)) trends of averaged PET values across the research area for the period 2001-2020. Background map source: Esri, HERE, Garmin, FAO, NOAA, USGS. Note: The trends are expressed in °C per 20-year period. Statistically significant trends (95% of confidence level) are marked with an asterisk (*). The letter marks a), b) and c) represent PET trends from measurement terms at 7 am, 2 pm, and 9 pm.
