Spectral Heterogeneity Predicts Local-scale Gamma and Beta Diversity of Mesic Grasslands

H. Wayne Polley, Chenghai Yang, Brian J. Wilsey and Philip A. Fay

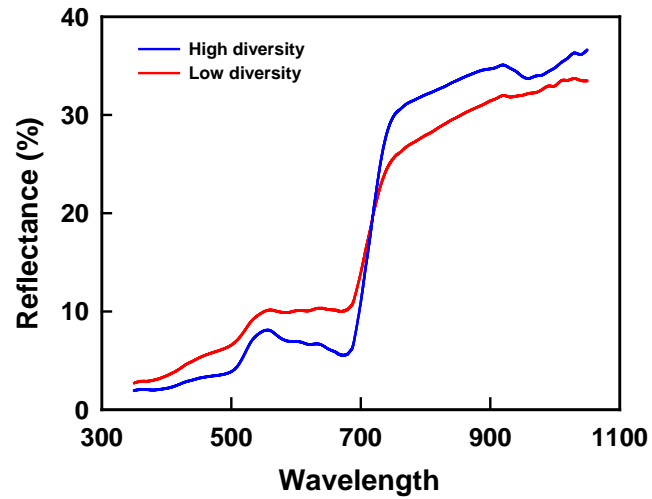

fig. S1

Figure S1. Mean values of reflectance as a function of wavelength for 7-m diameter patches that differed in species diversity. Reflectance per waveband was averaged across patches with gamma (γ) diversity < 6.0 and > 6.0 (low and high diversity, respectively; $n = 20, 26$).
