

Supplementary Materials: Quantifying Multi-Decadal Change of Planted Forest Cover Using Airborne LiDAR and Landsat Imagery

Xiaoyi Wang, Huabing Huang, Peng Gong, Gregory S. Biging, Qinchuan Xin, Yanlei Chen, Jun Yang and Caixia Liu

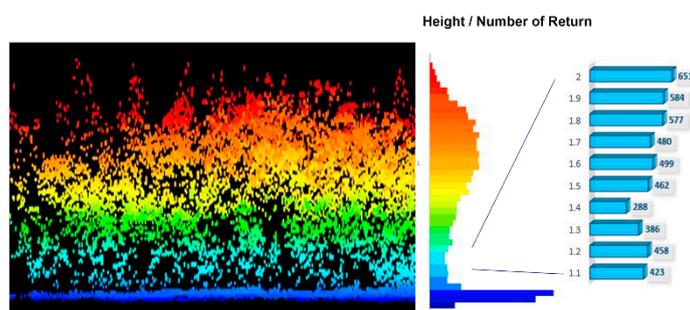

Figure S1. Number of return statistics. The area is approximately 0.2 km², and contains both afforestation and native forest area.

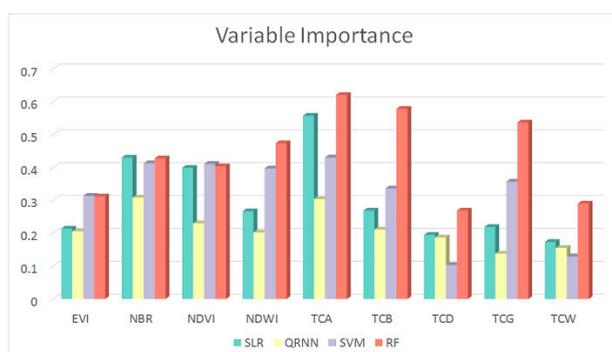

Figure S2. Variable importance of the contribution of all nine features to general regression.
