

Supplementary Figure 1 Effects of dipeptides on the production of TNF- α by microglia.

Effects of *in vitro* dipeptide treatment on the activation of microglia. Amount of TNF- α in the supernatants of microglial cultures pretreated with 50 μ M each of 336 dipeptides and followed by treatment with 5 ng/mL LPS and 0.5 ng/mL IFN- γ . Data are expressed as the ratio of TNF- α + each dipeptide levels to vehicle treatment.
