^a Dietary inflammatory index® (DII®) score presented by quintile at baseline, which divided the DII® scores into five levels (Q1 to Q5). ^b Data are presented as hazard ratios (HRs) with correspondent 95% confidence intervals (CI). ^c Multivariate-adjusted for gender, age, smoke, alcohol drinking, physical activity, BMI, family history of diabetes mellitus, family history of hypertension and energy intake. ^d p for trend values were determined using categorical DII® scores. MUFA: monosaturated fatty acid, PUFA, polyunsaturated fatty acid.

Table S3. Hazard ratios (HRs) and 95% confidence intervals (CIs) for risk of metabolic syndrome for selected food parameters according to the DII® quintiles for men participants

^a Dietary inflammatory index[®] (DII[®]) score presented by quintile at baseline, which divided the DII[®] scores into five levels (Q1 to Q5). ^b Data are presented as hazard ratios (HRs) with correspondent 95% confidence intervals (CI). ^c Multivariate-adjusted for age, smoke, alcohol drinking, physical activity, BMI, family history of diabetes mellitus, family history of hypertension and energy intake. ^d p for trend values were determined using categorical DII[®] scores. MUFA: monosaturated fatty acid, PUFA, polyunsaturated fatty acid.

Table S4. Hazard ratios (HRs) and 95% confidence intervals (CIs) for risk of metabolic syndrome for selected food parameters according to the DII® quintiles for women participants
