CTRL vs DSS, the control group compared with the DSS group; DSS vs CB, the DSS group compared with the CB group; DSS vs MPI, the DSS group compared with the MPI group; DSS vs CON, the DSS group compared with the CON group. Fold change (FC), indicates the ratio of average metabolite levels between the groups. VIP, variable importance in projection. ↑ / ↓, increase/decrease, /, no changes. The screening criteria for differential metabolites were set at VIP > 1.50 and $p < 0.05$.
