

Figure S1: Examples of annotated raw spectrum of identified lysine acetylation site.

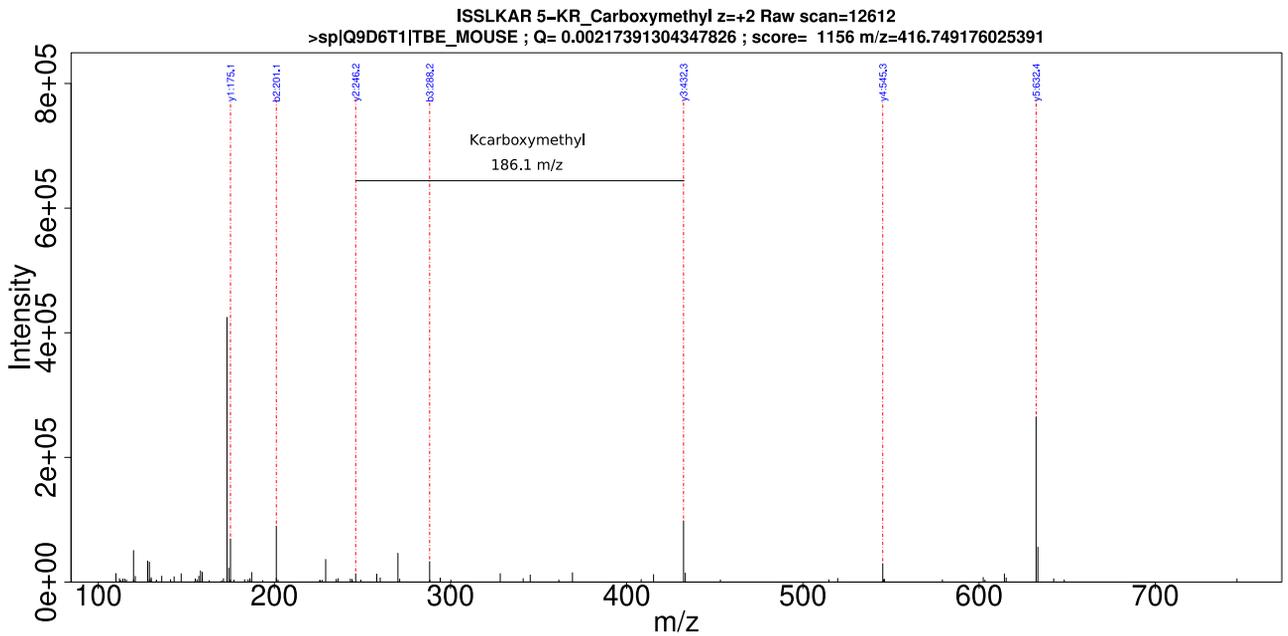

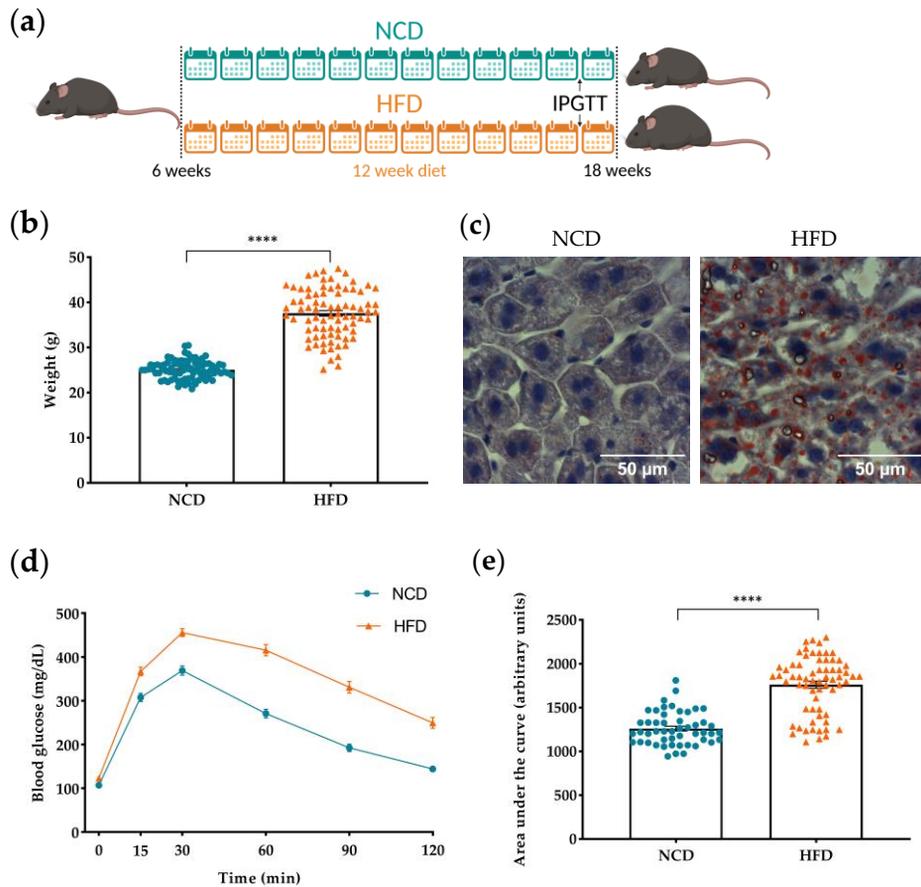

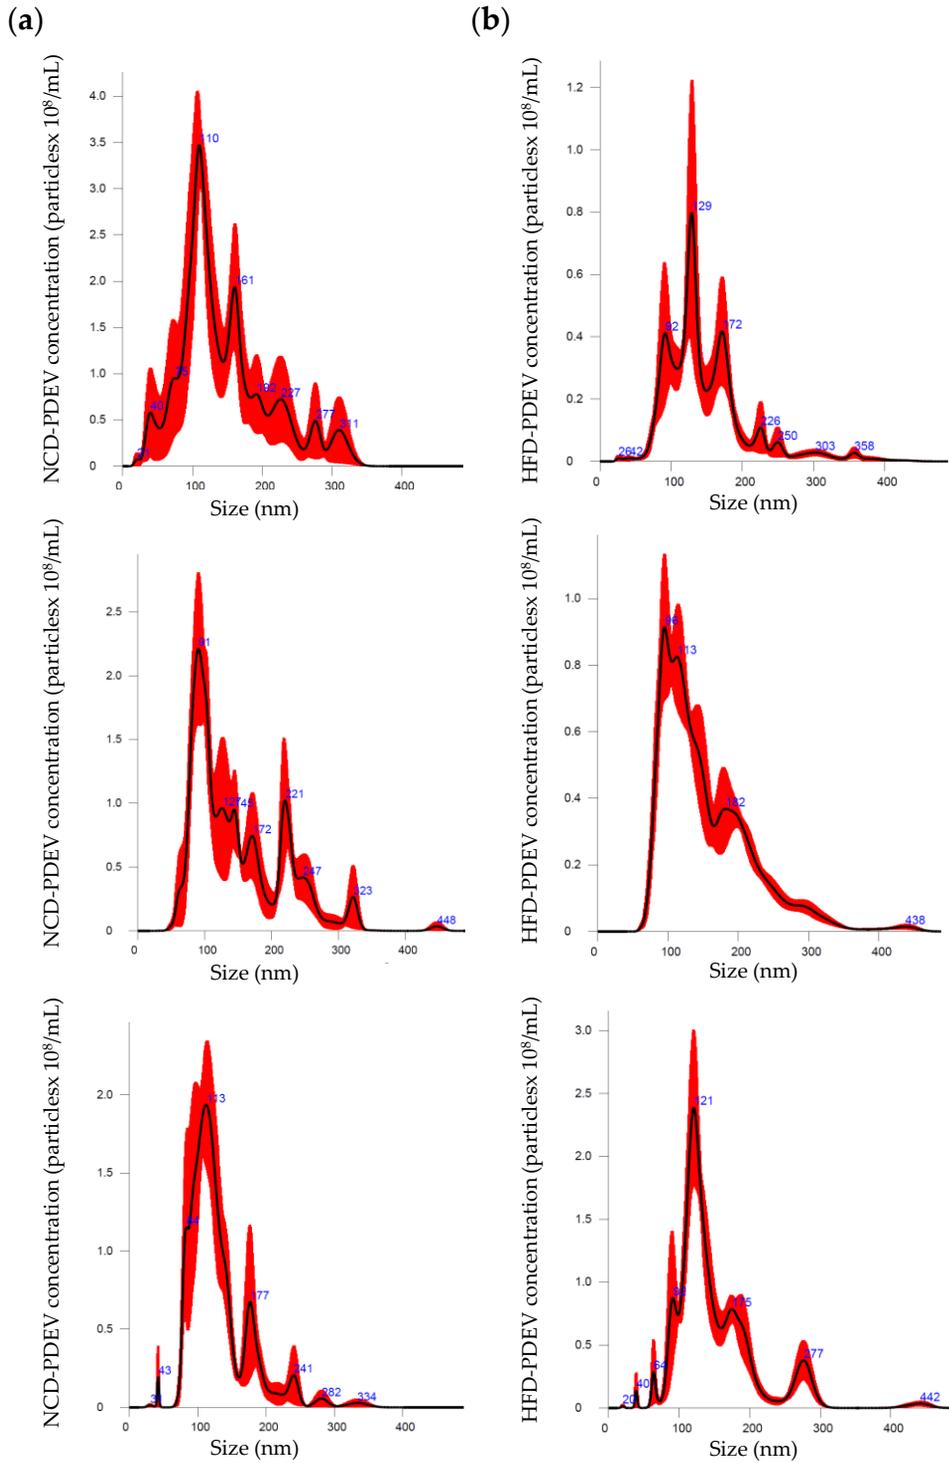

Figure S2: Examples of annotated raw spectrum of identified lysine glycation site.

**Figure S3: Diet-induced obese mouse model characterization.**

(a) Schematic representation of the 12-week diet plan. Obesity was induced in male C57Bl/6J mice by feeding them a high fat diet (HFD), while control mice were fed a normal chow diet (NCD). At the 11th week of diet, mice are subjected to intra-peritoneal glucose tolerance test (ipGTT). (b) Statistical analysis of mouse body weight (circles indicate individual animals). (c) Hematoxylin and eosin + Oil Red O staining in liver, histological sections of NCD and HFD mice with 63X magnification. (d) Representation of ipGTT at different time points after glucose administration (0, 15, 30, 60, 90, 120 minutes). (e) Statistical analysis of the area under the curve of the ipGTT graph (circles indicate individual animals; n=60 for NCD and n=70 for HFD).

All statistical analysis were performed using Unpaired t-test with Welch's correction. All data are presented as mean  $\pm$  standard error of the mean. \*\*\*\* P-value < 0.0001.

**Figure S4: Nanoparticle tracking analysis of Plasma EVs.**

Size and concentration distribution of Plasma EVs determined by nanoparticle tracking analysis (NTA). **(a)** NTA graphs of Plasma EVs replicates from NCD mice. **(b)** NTA graphs of Plasma EVs replicates from HFD mice.

**Table S1: List of 112 protein exclusively identified in Plasma EVs from NCD mice relative to Figure 2b and Figure 3.**
