

Supplementary Materials: A Single Tri-Epitopic Antibody Virtually Recapitulates the Potency of a Combination of Three Monoclonal Antibodies in Neutralization of Botulinum Neurotoxin Serotype A

Jianlong Lou, Weihua Wen, Fraser Conrad, Qi Meng, Jianbo Dong, Zhengda Sun, Consuelo Garcia-Rodriguez, Shauna Farr-Jones, Luisa W. Cheng, Thomas D. Henderson, Jennifer L. Brown, Theresa J. Smith, Leonard A. Smith, Anthony Cormier and James D. Marks

Figure S1. Binding affinity measurement of the BeAb and TeAb by flow fluorimetry. (A) During incubation of the BeAb with antibody-specific domains, 4 binding states exist: free antibody^a, free domain^b, and complexes where one or both of the binding sites of the antibody are occupied^{c,d}. States with free epitopes (i.e. unbound domains) can bind to KinExA capture beads while others flow through; (B) Similarly, during incubation of the TeAb with antibody-specific domains 4 states exist and only unbound domain can bind to detection beads; (C) When the BeAb is incubated with holotoxin, the presence of multiple binding epitopes on the target molecule allows the formation of many more states, including avid binding at both sites^e and crosslinking^f. Any state with free target

epitopes may be captured by the beads; (D) When the TeAb is incubated with holotoxin, the presence of an additional binding site further supports the formation of large complexes⁸.

Table 1: Primers used for TeAb construction and sequencing confirmation.

Name of Primer	Full Sequence (5'-)	Used for
ForTeAbscfvseq	CCTGCGAAGTCACCCATCAGG	RAZ1 scFv domain in TeAb sequencing
primer4scfvconfirm	GACAAACCACAACCTAGAATGC	RAZ1 scFv domain in TeAb sequencing
TeAbK scFv seq3'primer	CGTTAACGGATCTGAATTCAACAC	RAZ1 scFv domain in TeAb sequencing
TeAbK scFv seq5'primer	GAAGTCACCCATCAGGGCCTGAGC	RAZ1 scFv domain in TeAb sequencing
TeAb2Vk seq5'primer	GTCAGATCGCCTGGAGACGCC	2G11&CR2 Vk in BeAb or TeAb sequencing
TeAb2Hlinker seq 3'primer	GGCCAGGGGGAACACGGAGGGTCC	2G11&CR2 VH in BeAb or TeAb sequencing
TeAb2Klinker seq 3'primer	GTCGGAAGGGGGAAGATGAACACG	2G11&CR2Vk in BeAb or TeAb sequencing
DralllinBsiWoutVklinker3'primer	ACTGCTCATCTAGGGTGAGAAGATGAAGACA GATGGTGCAGCCACGGTACGTTTGATTTC	2G11&CR2 Vk domain link subclone
