

**Figure S1.** Distribution of concentration ( $\mu\text{g}/\text{kg}$  DM, linear scale) of (a) groups of fungal and unspecific metabolites, included accumulated mycotoxins and (b) total phytoestrogens and plant metabolites detected in whole-plant corn silages (yellow) and total mix ratios (gray) in dairy farms in Mexico. Asterisks (\*) show significant differences ( $p$ -value  $< 0.05$ ) between the concentration in the re-spective group in whole-plant corn silages and total mix ratios according to the Wilcoxon matched-pairs signed rank test ( $p$ -values in Table 2). Means are shown as “+”.

**Table S1.** Description of the co-contamination level of the diverse groups of analysis detected in whole-plant corn silages and total mixed rations of Mexican dairy farms.
