

Supplementary Materials: Target-specificity in scorpions; Comparing lethality of scorpion venoms across arthropods and vertebrates

Arie van der Meijden, Bjørn Koch, Tom van der Valk, Leidy J. Vargas-Muñoz and Sebastian Estrada-Gómez

Table S1. Table with GenBank CO1 accession numbers. Voucher numbers refer to the specimens in the collection of CIBIO/InBio at the University of Porto.

Species	Voucher	Accession number
<i>Androctonus australis</i>	Sc904	gi379647585
<i>Leiurus quinquestriatus</i>	Sc1062	gi379647601
<i>Buthus ibericus</i>	Sc112	gi290918312
<i>Grosphus flavopiceus</i>	Sc1085	gi379647593
<i>Centruroides gracilis</i>		gi71743793
<i>Heterometrus laoticus</i>	Sc1084	gi555299473
<i>Pandinus imperator</i>	Sc1050	gi379647587
<i>Hadrurus arizonensis</i>	Sc1042	gi379647597
<i>Iurus kraepelini</i>	Sc866	gi379647589

Table S2. Mean dry venom compound per individual. Several milkings were made per (sub)adult specimen in some cases.

Species	n	Dry venom (mg)	mg/milking
<i>Androctonus australis</i>	21	23.5	1.12
<i>Leiurus quinquestriatus</i>	51	25.1	0.49
<i>Buthus ibericus</i>	47	41.6	0.89
<i>Centruroides gracilis</i>	42	22.5	0.54
<i>Babycurus jacksoni</i>	38	53.9	1.42
<i>Grosphus grandidieri</i>	19	103.9	5.47
<i>Hadrurus arizonensis</i>	9	75.3	8.37
<i>Iurus</i> sp.*	12	35.2	2.93
<i>Heterometrus laoticus</i>	21	119	5.67
<i>Pandinus imperator</i>	15	72.7	4.85

*2 *I. dufourei*, 6 *I. kraepelini*, 4 *I. sp.*

Table S3. Toxicological analysis of the venom of *Grosphus grandidieri*. “Toxic” means that the mice showed symptoms such as: pain, piloerection, excitability, salivation, lacrimation, dyspnea, diarrhea, temporary paralysis, but recovered within 20 h. “Lethal” means that the mice showed some or all the symptoms of intoxication and died within 20 h after injection.

Time mins	10 mins	15 mins	20 mins	30 mins	40 mins	50 mins	>60 mins	
Group 1 Non-lethal 100µg/animal	None	None	None	Lacrimation	Lacrimation Erratic movements Pain	Lacrimation Erratic movements Pain	Lacrimation Erratic movements Pain Diahrrea	Recovered after 24 h
Group 2 Non-lethal 150 µg/animal	None	None	Salivation	Lacrimation Pain	Lacrimation Erratic movements Pain	Lacrimation Erratic movements Pain	Lacrimation Erratic movements Pain Diahrrea	Recovered after 24 h
Group 3 Toxic Lethal 250 µg/animal	None	None	Erratic movements	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	
Group 4 Toxic Lethal 350 µg/animal			Pain Erratic movements	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	
Group 5 Toxic Lethal 400 µg/animal	None	Pain	Pain Lacrimation Erratic movements	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation	Pain Lacrimation Erratic movements Salivation Temporary paralysis Diahrrea	Death	
Group 6 Lethal 1000 µg/animal	Pain	Pain Salivation Lacrimation	Pain Salivation Lacrimation Erratic movements	Death				

Figure S1. Phylogeny of scorpions based on CO1 sequences. Note that *Grosphus flavopiceus* has been used to represent the position of *G. grandidieri*, and likewise a sequence of *Lurus kraepelini* has been used to represent *I. dufourei*. The branch separating *Buthus ibericus* from the clade containing *Androctonus australis* and *Leiurus quinquestriatus* is very short.

Figure S2. Time tree of target organisms used to calculate phylogenetic signal, built using the online service TimeTree (<http://timetreebeta.igem.temple.edu/>). Numbers at branches indicate divergence times in millions of years.
