

Figure S2. Effect of pazopanib on autophagic-lysosomal pathway in SS cell lines. Cells were exposed to solvent or pazopanib (5 μ M CME-1 cells, 1.3 μ M SYO-1 cells, 20 μ M MoJo cells) for the indicated times and then lysed and processed for western blot analysis to monitor overtime the effect on levels of autophagy-related proteins. (A) Levels of LC3I and its lipidated form LC3II. (B) Levels of p62 and lysosomal protein LAMP2.
