

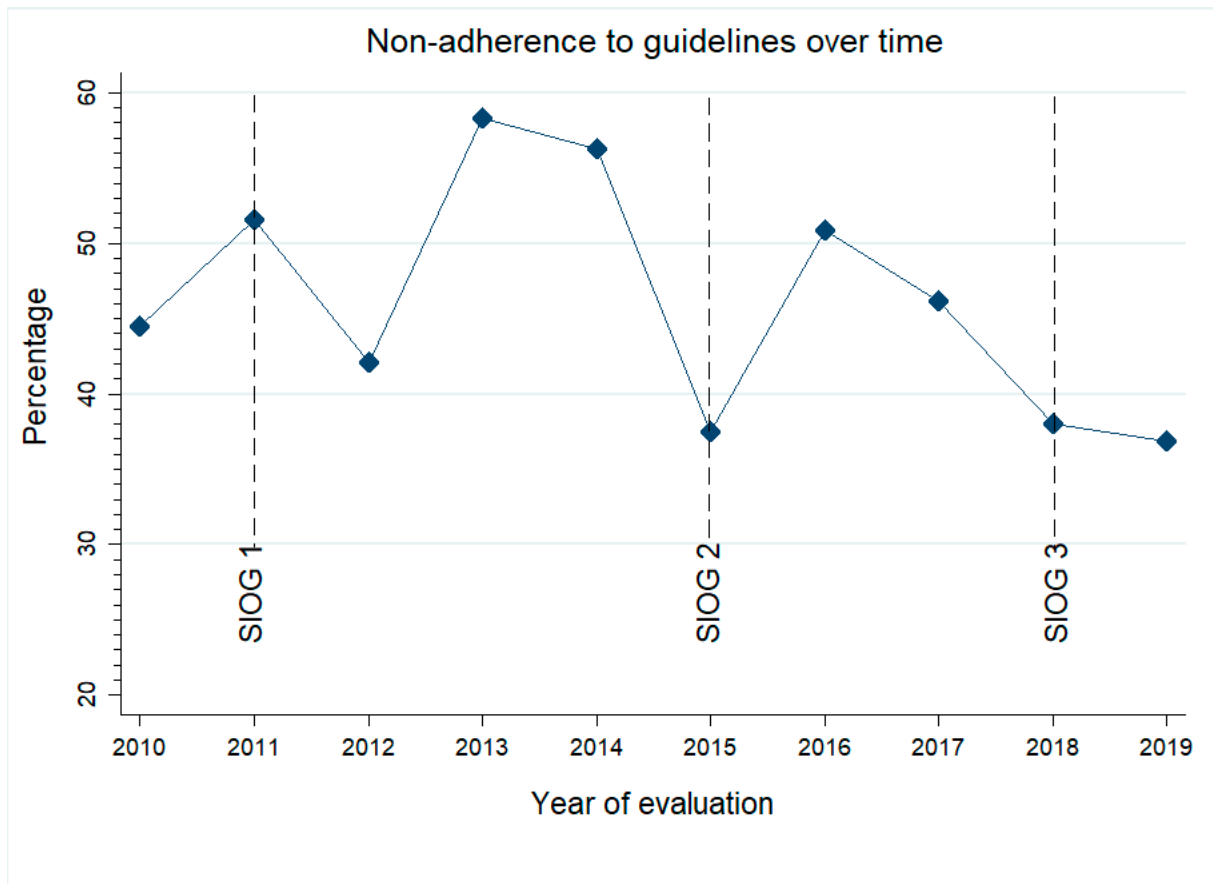

Figure S3. Change over time (2010-2019) in the proportion of GDT in the ELCAPA cohort.

The dashed lines indicate the year after an update in the SIOG's health status classification. SIOG1:2010, SIOG2:2014, SIOG3:2017. Spearman's correlation coefficient was calculated as a guide to the relationship between the proportion of patients with GDT and time (year). There was a statistically significant correlation between GDT and time; overall, the proportion of patients with GDT fell over time (Spearman's correlation coefficient = -0.48, $p = <0.001$). SIOG: International Society of Geriatric Oncology.
