Supplemental Figure 8. Select signature enrichments for EBV-associated cell clusters at individual donor level: the bubble-plot illustrates select signature enrichments across the identified cell clusters all donors (DN1-DN8), upper part of figure illustrates signature terms relate to B-cell differentiation states, lower part of figure illustrates signatures related to selected pathways as indicated on the left of the figure. Significant enrichment is illustrated on a blue to red colour scale (Z-score) with bubble size reflecting FDR significance.
