

Supporting information

Isolation of a *Bacillus aryabhattachai* strain for the resolution of (*R*, *S*)-ethyl indoline-2-carboxylate to produce (*S*)-indoline-2-carboxylic acid

Yinjun Zhang ^{1,*}, Jialin Chen ¹, Changsheng Chen ¹ and Shijin Wu ^{1,*}

¹ Key Laboratory of Bioorganic Synthesis of Zhejiang Province, College of Biotechnology and Bioengineering, Zhejiang University of Technology, Hangzhou 310014, Zhejiang, P. R. China

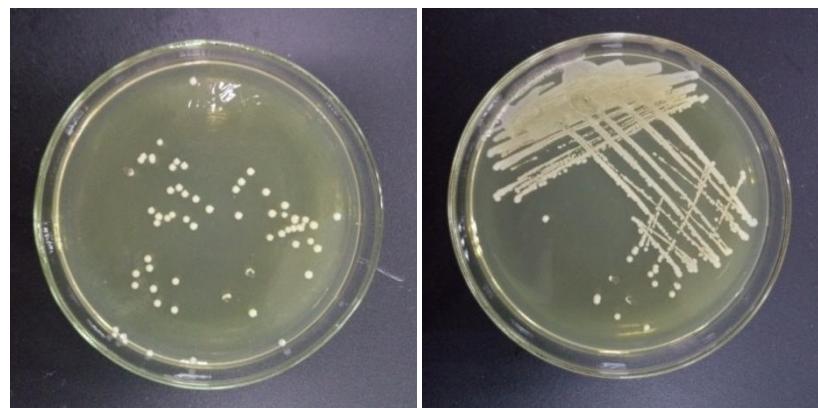

Figure S1. Colony morphology of Strain C26-1. The colonies were large, white, and nearly round, with a dry, opaque surfaces, and clear boundaries.

Figure S2. The gram staining pattern of the strain. The cells observed with an optical microscope, they are the group as Gram-positive bacteria.

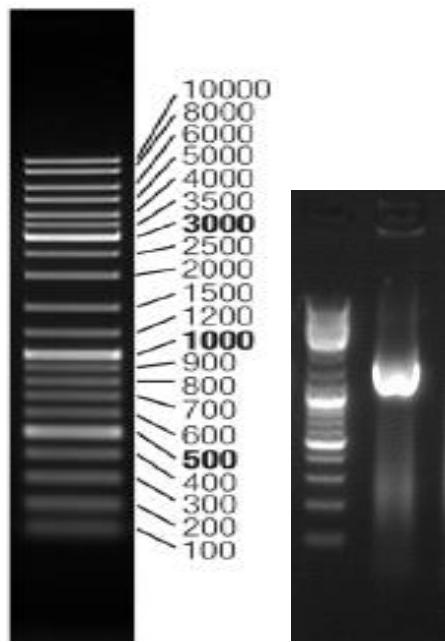

Figure S3. 16S rDNA sequence agarose gel electrophoresis. The strip size is approximately 1500 bp

Figure S4. 16S rDNA of strain *Bacillus aryabhattai* was sequenced and the total length was 1470 bp.

Table S1. Strain C26-1 on Biolog GEN III plates: Its utilization of 71 carbon sources and sensitivity to 23 chemicals.

Substrate	Result	Substrate	Result	Substrate	Result
Negative Control	-	D-Glucose-6-PO ₄	+	γ -Amino-Butyric Acid	+
extrin	+	D-Fructose-6-PO ₄	+	α -Hydroxy-Butyric Acid	+
