Figure S11. AFM images and corresponding cross-section profile of (A) one-, (B) three-, (C) five-bilayer-thick (PBA-PAMAM/PVA)_n films. In the AFM image of (D), the (PBA-PAMAM/PVA)₅ film was immersed in a 10 mM H₂O₂ solution (pH 7) for 15 min, rinsed with purified water, and dried in a desiccator.

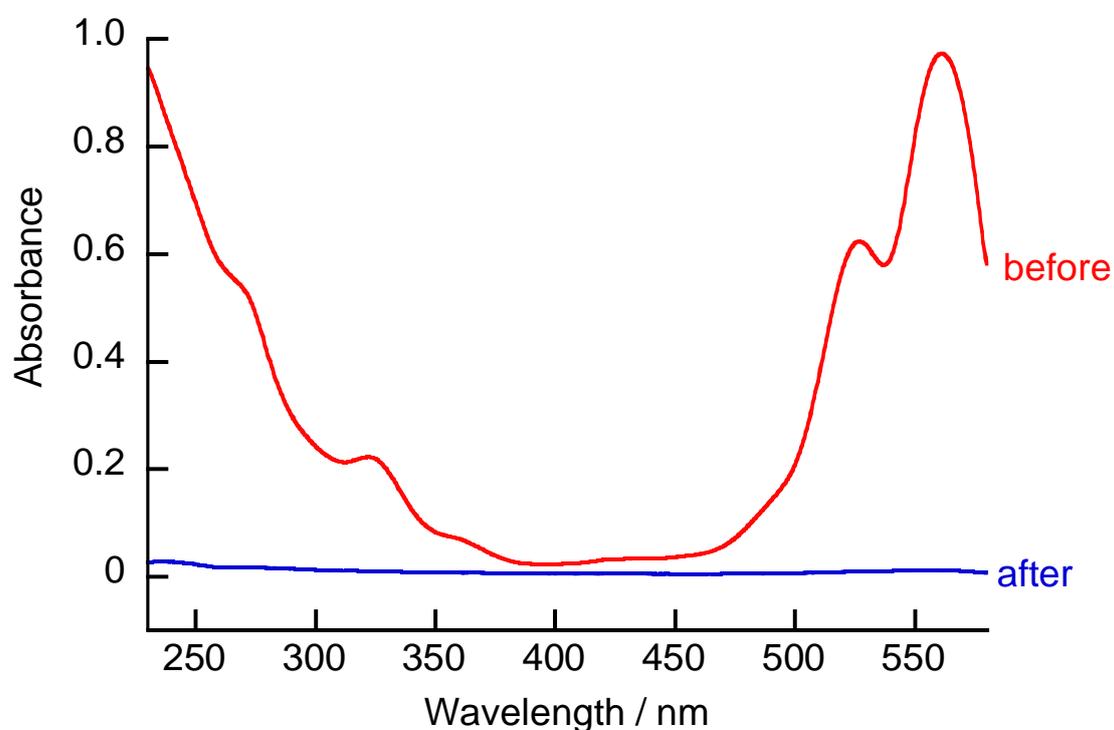

6

7

Figure SI2. Frequency change when the (PB-PAMAM/PVA)₅ film is immersed in RB solutions (0.1 mg/mL) with various pHs. The LbL films were immersed in RB solutions with (a) pH9, (b) pH 8, (c) pH 7, (d) pH 6, (e) pH 5 and (f) pH 6.

Figure SI3. UV-vis absorption spectra of RB-adsorbed (PBA-PAMAM/PVA)₅ film before and after immersion in H₂O₂ solution. The (PBA-PAMAM/PVA)₅ film was immersed in RB solution at pH 7 for RB adsorption to the LbL film. The RB-adsorbed (PBA-PAMAM/PVA)₅ film was immersed in 100 mM H₂O₂ solution at pH 9.
