**Figure S1.** J/V curves of PSCs stored for a long time of (a) pure spiro-OMeTAD and (b) PMMA (2 mg/mL): spiro-OMeTAD based cells kept in the air atmosphere at RH = 40% for 80 days.

**Figure S2.** The procedures of renovating long-term stored PSCs. The gray layer represents the Ag electrode, the purple layer represents the spiro-OMeTAD and the orange layer represents perovskite and other support layers.
