Table S8. Summary of transition and transversion mutations of single nucleotide polymorphisms (SNPs) identified across 306 *M. micrantha* individuals.

Transition/Transversion mutation model	SNP number
Mutation between bases A and G	5051
Mutation between bases C and T	5156
Mutation between bases A and C	1808
Mutation between bases A and T	2008
Mutation between bases T and G	1832
Mutation between bases C and G	1089

Table S9. The locations and mutation types of SNPs in the *M. micrantha* genome.

Category	Number of SNPs
Upstream	312
Downstream	316
Upstream/Downstream	21
Intronic	1448
Splicing	6
Intergenic	13,984
5'-UTR	62
3'-UTR	81
Synonymous	402
Nonsynonymous	305
unknown	4
Other	3

Upstream: SNP is located in the 1000 bp region upstream of the gene; Downstream: SNP is located in the 1000 bp region downstream of the gene; Upstream/Downstream: SNP is located in the 1000 bp region upstream of the gene and also in the 1000 bp region downstream of another gene; Intergenic: SNPs are located in intergenic regions; Intronic: SNPs are located in intronic regions; Splicing: SNPs are located at the splice site; 5'-UTR: SNPs are located in 5' untranslated regions; 3'-UTR: SNPs are located in 3' untranslated regions; Synonymous: synonymous amino acid substitution; Nonsynonymous: nonsynonymous amino acid substitution.

Table S10. The analysis results of the differences in genetic diversity parameters among the six regions obtained from Kruskal-Wallis and post hoc Nemenyi test.

Genetic parameters	Degrees of freedom	Chi-squared	p-value
Allelic richness (A_R)	5	9.750	0.083
Observed heterozygosity (H_o)	5	5.727	0.334
Gene diversity (H_s)	5	5.220	0.390
Inbreeding coefficient (F_{IS})	5	3.185	0.672

Table S11. Genetic differentiation and gene flow between pairwise populations for *M. micrantha*. The lower triangle represents genetic differentiation values (F_{ST}), and the upper triangle represents gene flow between pairwise populations.
