

Supplementary data

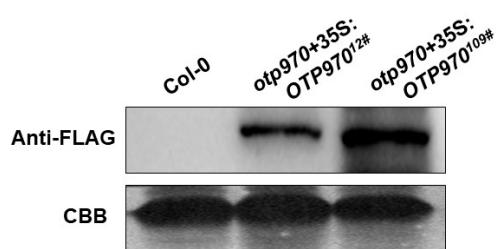

Figure S1. Western blot analysis of *otp970* complemented 35:OTP970/*otp970* plants.

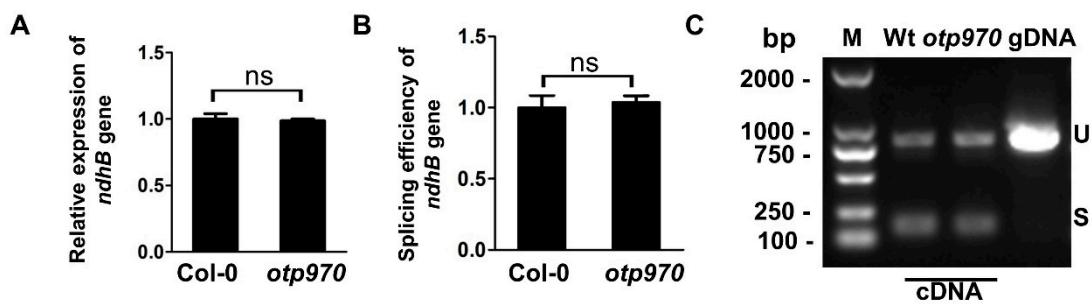

Figure S2. Transcript profiles of genes with the editing defects in *otp970*. (A) RT-qPCR-based analysis of *ndhB* expression. (B) RT-qPCR-based analysis of splicing efficiency of *ndhB* in wild-type and *otp970* plant. (C) RT-PCR analysis of the *ndhB* transcripts from wild-type (Col-0), *otp970* plant. Molecular weight markers (M) are shown on the left; the product amplified from total DNA (gDNA) is shown in the right side. S, Spliced; U, unspliced. Significant differences were identified using the Student's *t*-test, ns indicated no significant differences.

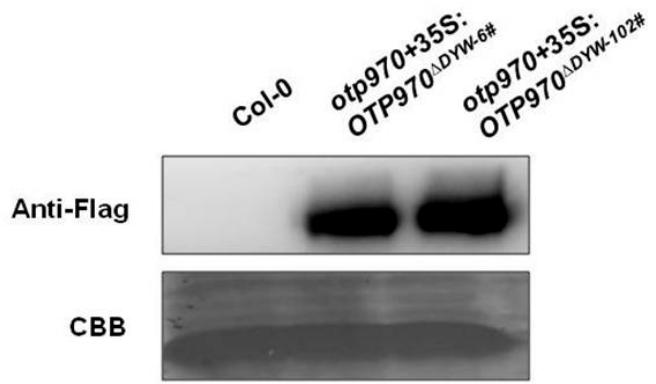

Figure S3. Western blot analysis of the OTP970 lacking the DYW motif (OTP970^ΔDYW). OTP970^ΔDYW protein was fused with flag and then transformed in *otp970*. Anti-Flag antibody was used to detection the wild-type (Col-0) and two transgenic plants. CBB, Coomassie brilliant blue.

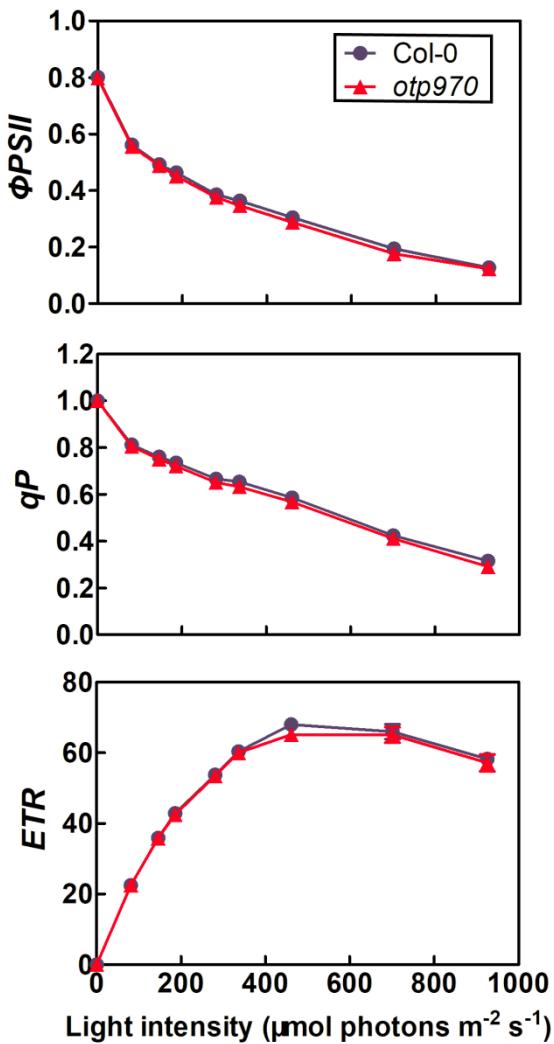

Figure S4. In vivo analysis of electron transport activity in wild-type and *otp970* *Arabidopsis* mutant plants. Light-response curves of PSII quantum yield (Φ_{PSII}), photochemical quenching (qP), and electron transport rate (ETR) from 4-week-old Col-0 and *otp970* plants. Chl fluorescence measurements were performed at the following light intensities: 0, 81, 145, 186, 281, 335, 461, 701 and 926 $\mu\text{mol photons m}^{-2} \text{s}^{-1}$. Data for wild-type and *otp970* plants are presented as the mean \pm SE of triplicates.

Table S1. List of primers used in this study

Primer	Sequence
Mutants Identification	
SALK_150217-F	5'- TGGTTTGATGGAATCCAGC-3'
SALK_150217-R	5'- AACATTGATGTTGTCTCGCC-3'
Real Time-PCR	
OTP970-F	5'- AAGTTGCTGCTAAGTTATTG-3'
OTP970-R	5'-CACTTAGATCATGTTGTACTGACA-3'
