**Supplemental Table S41. All measured epitranscriptomic marks after daily 600 mg/kg APAP for 4 days.** Calculations for each epitranscriptomic gene count and comparisons between WT and *Alkbh8*<sup>Def</sup> liver tissue post 4 day exposure to 600 mg/kg of APAP with reported statistical significance of biological replicates (N = 3) measured by an unpaired t-test. Increased expression (> 0) is reported in red shade and gene counts expressed (< 0) were reported shaded green. Significant comparisons (p ≤ 0.05) are shaded in yellow.

## **Supplemental Figure Legends**

**Figure S1. Transcripts regulated in *Alkbh8<sup>Def</sup>* Saline vs. WT Saline mice in the 6 hour APAP experiment.** (A) Enhanced volcano plots were generated for *Alkbh8<sup>Def</sup>* saline verse WT saline and (B) Metascape analysis were performed for  $\log_2\text{FC} > 2.0$  and transcripts regulated were identified.

**Figure S2. Selenoproteins measured after 6 hour APAP exposure.** GPX4, TRXR1 and SELS protein levels in the liver were evaluated using the ProteinSimple WES system. Statistical significance of biological replicates ( $N = 3$ ) was measured by an unpaired t-test with (\* $p < 0.05$ , \*\* $p < 0.01$ , \*\*\* $p < 0.001$ ).

**Figure S3. Remainder of measured epitranscriptomic marks in mouse liver tissue after APAP (6 hours).** WT and *Alkbh8<sup>Def</sup>* mice ( $N = 3$ ) were exposed to a single 600 mg/kg dose of APAP and livers were harvested 6 hours after dosing. Modifications were measured using LC-MS/MS. Statistical significance of biological replicates ( $N = 3$ ) was measured by an unpaired t-test with (\* $p < 0.05$ , \*\* $p < 0.01$ , \*\*\* $p < 0.001$ ).

**Figure S4. Transcripts regulated in *Alkbh8<sup>Def</sup>* Saline verse WT Saline mice in the 4 day APAP experiment.** (A) Enhanced volcano plots were generated for *Alkbh8<sup>Def</sup>* saline verse WT saline and (B) Metascape analysis were performed for  $\log_2\text{FC} > 2.0$  and transcripts regulated were identified.

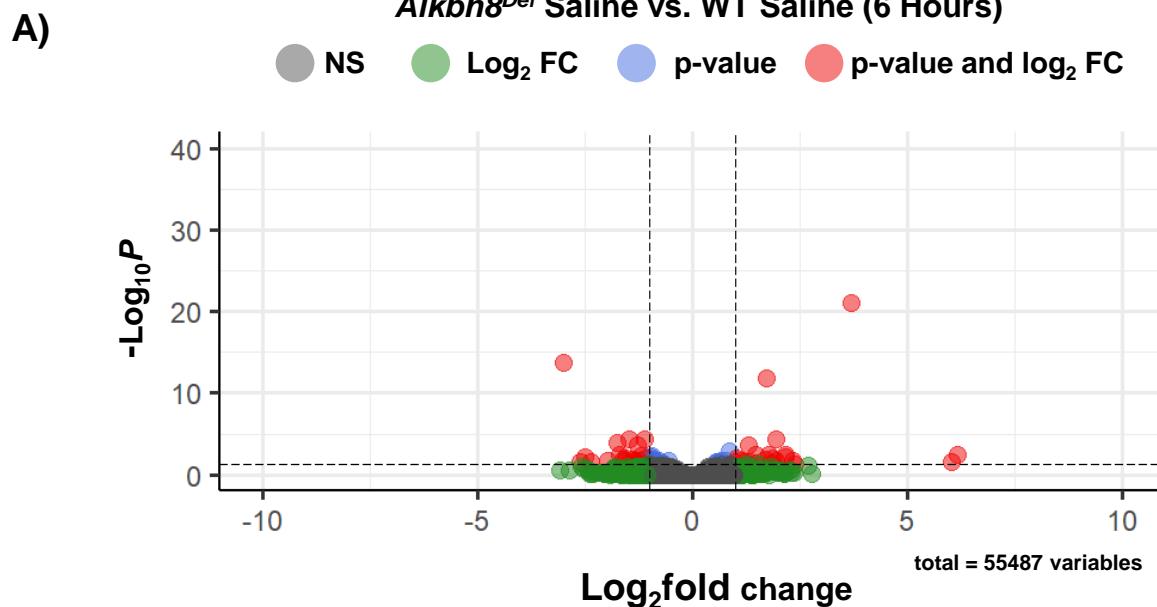

**Figure S5. Transcripts regulated in *Alkbh8<sup>Def</sup>* APAP verse WT APAP in the 4 day experiment.** Wildtype and *Alkbh8<sup>Def</sup>* mice ( $N = 3$ ) were exposed to daily doses of 600 mg/kg APAP over 4 days and tissue was harvested 24 hours after the fourth dose was administered and RNA was purified for analysis by mRNA-seq. (A) Enhanced volcano plots were generated for

*Alkbh8*<sup>Def</sup> APAP verse WT APAP and **(B)** Metascape analysis were performed for  $\log_2\text{FC} > 2.0$  and transcripts regulated were identified.

**Figure S6. Selenoprotein S expression elevated in *Alkbh8*<sup>Def</sup> liver tissue after 4 day APAP exposure.** SELS expression was evaluated using the ProteinSimple WES system. Statistical significance of biological replicates ( $N = 3$ ) was determined using an unpaired t-test with (\* $p < 0.05$ , \*\* $p < 0.01$ , \*\*\*  $p < 0.001$ ).

**Figure S7. tRNA modifications measured after 4 day APAP exposure.** **(A)** WT and *Alkbh8*<sup>Def</sup> mice ( $N=3$ ) were exposed to a daily 600 mg/kg dose of APAP and livers were harvested 4 days after dosing. **(B)** Individual bar graphs showing average concentrations of various tRNA chemical modifications measured using LC-MS/MS. Statistical significance of biological replicates ( $N = 3$ ) were measured by an unpaired t-test with (\* $p < 0.05$ , \*\* $p < 0.01$ , \*\*\*  $p < 0.001$ ).
