

Figure S8. Distribution of plastome sequences in chromosomes 01-12 of four assembled versions of the nuclear genome in *O. sativa*. The red lines represent the transferred sequences of plastome-to-chromosome when the identity is greater than 95% and the length is greater than 100 bp, and the blue lines represent all transfer fragments except for the specific category mentioned above when the identity is greater than 80%. Accession number: *O. sativa*, NC_008155.1.
