

Supplementary Table S3 BLAT results of HBV Region 2 against human genome. HBV Region 2 of different genotypes has been found to be integrated in different intronic regions of different genes within human genome.

Hepatitis B Virus Genotype	Viral Sequence Putative "Region 2"				Human Chromosomal Region Information						
	BLAT Score	Start Position	End Position	Sequence Identity Percentage	Chromosome number	Strand	Start position	End Position	Genes within the corresponding chromosomal region	Location within the gene where the viral genomic region found	
A	22	8	30	100%	16	-	66992169	66992192	<i>CES4A</i>	Intron (1/11)	
	21	11	33	95.7%	1	-	46522501	46522523	Alternate haplotype sequence
