

Supplemental Materials Table 1: Positive incidence of *H. halys* consumption by birds. We detected consumption of the brown marmorated stink bug (*H. halys*) in four out of 257 avian fecal samples. We considered a positive incidence of predation on *H. halys* if RFUs >0.075. For each bird species the USGS aluminum band prefix and band code, RFU values, and concentration (ng/uL) are shown. RFU values and concentration were visualized on a Qiagen Qiaxcel Advanced System.

Sample	Band prefix	Band code	RFU	Concentration (ng/uL)
Tufted titmouse	2941	24633	0.17	0.25
Carolina wren	2941	24656	0.157	0.24
Carolina wren	2941	24664	0.077	0.12
Northern cardinal	2841	26539	0.151	0.22
Positive control	-	-	0.76	1.9
Positive control	-	-	1.564	2.43
