

# Supplementary Materials: Diversity and Phylogenetic Analyses of Bacterial Symbionts in Three Whitefly Species from Southeast Europe

Marisa Skaljac, Surapathrudu Kanakala, Katja Zanic, Jasna Puizina, Ivana Lepen Pleic and Murad Ganim

**Figure S1.** Individual and multiple infections by secondary bacterial symbionts in five *B. tabaci* and six *T. vaporariorum* populations from Croatia, Montenegro, Macedonia, and Serbia. Each square represents one population and each column represents one type of symbiont; the 20 rows per table represent the 20 individuals tested per population. Gray fields indicate positive infection for the tested symbiont. Population number, country and geographical location, species, and number of tested individuals are indicated at the top of each table. Symbionts: R—Rickettsia, H—Hamiltonella, A—Arsenophonus, W—Wolbachia, C—Cardinium.

**Table S1.** The whitefly populations used in this study.
