

**Table S1:** Description of the six macroscopically visible nodules evidenced in the right lung of the spectacled caiman

Number	Diameter in cm	Description
1	1,5	The nodule presented a thick white wall and an increased consistency respect the lung tissue. After cutting, internally a white material surrounding by reddish tissue and a clear fluid were evidenced.
2	1,3	The nodule presented a thick white wall and an increased consistency respect the lung tissue. After cutting, internally a white material surrounding by reddish tissue and a clear fluid were evidenced.
3	1,2	The nodule presented a thick white wall and an increased consistency respect the lung tissue. After cutting, internally a reddish tissue was evidenced.
4	1,2	The nodule presented a thick white wall and an increased consistency respect the lung tissue. After cutting, internally a reddish tissue was evidenced.
5	0,9	The nodule presented a reddish wall and an increased consistency respect the lung tissue. After cutting, internally a reddish tissue was evidenced. The tissue of the lung surrounding the nodule was reddish.
6	0,8	The nodule presented a reddish wall and an increased consistency respect the lung tissue. After cutting, internally a reddish tissue was evidenced. The tissue of the lung surrounding the nodule was reddish.
