**Table S2.** Results of the hazard identification of fishing baits.

3

Pathogen (Disease)	Susceptible species	Reportable or listed disease (Yes/No)		Geographic distribution		Sub- types	Zoonotic disease (Yes/No)	Entry may cause an outbreak and increase domestic damage (Yes/No)	Establishment and implementation of a monitoring plan at the national level (Yes/No)	Considered a hazard in this study? (Yes/No: Reasons)	References
		WOAH	South Korea	Others	South Korea						
<i>Vibrio</i> <i>parahaemolyticus</i> strains containing Pir toxins <i>Vp</i> <sub>AHPND</sub> (acute hepatopancreatic necrosis disease, AHPND)	<i>Penaeus</i> <i>chinensis</i> <i>Penaeus</i> <i>japonicus</i> <i>Penaeus</i> <i>monodon</i> <i>Penaeus</i> <i>semisulcatus</i> <i>Penaeus</i> <i>vannamei</i> (various penaeid species)	Yes	Yes	Bangladesh China Costa Rica Egypt Malaysia Mexico Myanmar Peru Philippines Taiwan Thailand Vietnam	Yes	-	No	Yes	Yes	Yes: AHPND is listed by the WOAH and is associated with significant losses in prawn farming environment and is widespread in countries likely to export large quantities of prawns to Korea. AHPND is also included on the <i>List of diseases in</i> <i>Korea</i> , and the <i>List of diseases in</i> <i>the Asia-Pacific</i> .	[49–56]

---

AHPND means infection with strains of *Vibrio parahaemolyticus* ( $Vp_{\text{AHPND}}$ ) that contain a ~70 kbp plasmid with genes that encode homologues of the *Photorhabdus* insect-related (Pir) toxins, PirA and PirB. Although there are reports of the isolation of other *Vibrio* sp. from clinical cases of AHPND, only  $Vp_{\text{AHPND}}$  has been demonstrated to cause AHPND. This pathogenic agent complies with the criteria described in the *WOAH Aquatic Animal Health*

---

										Code Article 2.1.2. Hazard Identification and will be retained for risk assessment.
Candidatus Hepatobacter penaei (Necrotising hepatopancreatitis, NHP)	<i>Penaeus</i>									Yes: NHP is WOAH listed and associated with significant losses in prawn farming environment and is widespread throughout the world. NHP is included on the <i>List of diseases in Korea and the List of diseases in the Asia-Pacific</i> . This pathogenic agent complies with the criteria described in the WOAH <i>Aquatic Animal Health Code Article 2.1.2. Hazard Identification</i>
	<i>aztecus</i>

---

---

revealed that CQIV and SHIV are different strains or genotypes of the same virus. The genome of SHIV was shown to be 99% identical to the genome of CQIV. Recently, SHIV and CQIV were formally classified by the International Committee on Taxonomy of Viruses (ICTV) under the name Decapod iridescent virus 1 (DIV1) in the family Iridoviridae (ICTV, 2018). DIV1 is included in *the List of diseases in the Asia-Pacific*, and listed as a

---

											<p>disease notifiable to the WOA and in the <i>List of diseases in Korea</i>.</p> <p>This pathogenic agent complies with the criteria described in the <i>WOAH Aquatic Animal Health Code Article 2.1.2. Hazard Identification</i> and will be retained for risk assessment.</p>
Infectious hypodermal and haematopoietic necrosis virus (IHHNV)	<p><i>Macrobrachium rosenbergii</i></p> <p><i>Penaeus californiensis</i></p> <p><i>Penaeus monodon</i></p> <p><i>Penaeus setiferus</i></p> <p><i>Penaeus stylirostris</i></p> <p><i>Penaeus vannamei...</i></p> <p>(various penaeid and</p>	Yes	Yes	<p>Africa</p> <p>Asia</p> <p>America</p> <p>Pacific islands</p>	Yes	Multiple strains	No	Yes	Yes	<p>Yes: is present in Korea. IHHNV is listed by WOA, is listed on <i>List of diseases in Korea</i>.</p>	[77–80]

[illegible]

Laem-Singh virus (LSNV) (Wenzhou shrimp virus genotype 9, WZSV9) (Monodon slow growth syndrome, MSGS)	<i>Penaeus dobsoni</i> <i>Penaeus merguiensis</i> <i>Penaeus monodon</i> <i>Penaeus vannamei...</i> (various penaeid species)	No	No	China India Indonesia Malaysia Philippines Sri Lanka Thailand Vietnam	No	No	No	Yes	No	Yes: It has recently been determined that LSNV and WZSV9 are different isolates of the same virus species. Although there is limited information regarding LSNV and its role in MSGS, large volume of imported prawns are sourced from countries that may be affected by MSGS. LSNV will be considered in context with MSGS. This pathogenic agent complies with the criteria described in the <i>WOAH Aquatic Animal Health Code Article</i>	[13,84–88]
---	---	----	----	--	----	----	----	-----	----	---	------------

										2.1.2. Hazard Identification and will be retained for risk assessment.
Taura syndrome virus (TSV)	<i>Penaeus aztecus</i>									Yes: TSV is WOAHA Listed and is associated with significant losses in prawn farming environment and is widespread throughout the world. TSV is included on the <i>List of diseases in Korea</i> , and the <i>List of diseases in the Asia-Pacific</i> . This pathogenic agent complies with the criteria described in the WOAHA Aquatic Animal Health Code Article 2.1.2. Hazard Identification
	<i>Penaeus ensis</i>									
	<i>Penaeus indicus</i>									
	<i>Penaeus monodon</i>			Americas (including Hawaii)						
	<i>Penaeus setiferus</i>			China						
	<i>Penaeus stylirostris</i>			East Africa						
	<i>Penaeus vannamei</i> ...	Yes	Yes	Indonesia	Yes	Yes	No	Yes	Yes	
	(various penaeid and caridean species)			Malaysia
