**Table S3. Primers used in the present work**

ISSR primers:

**B** (ag)<sub>8</sub> tg

**C** (ag)<sub>8</sub> cg

**D** (ag)<sub>8</sub>

**E** ctc (gt)<sub>8</sub>

**F** ct (ga)<sub>8</sub>

**G** gag (caa)<sub>5</sub>

JIA primers (300 bp product, specific for *F. avenaceum*/*F. arthrosporioides*):

**JIAf** GCTAATTCTTAACTTACTAGGGGCC

**JIAr** CTGTAATAGGTTATTTACATGGGCG

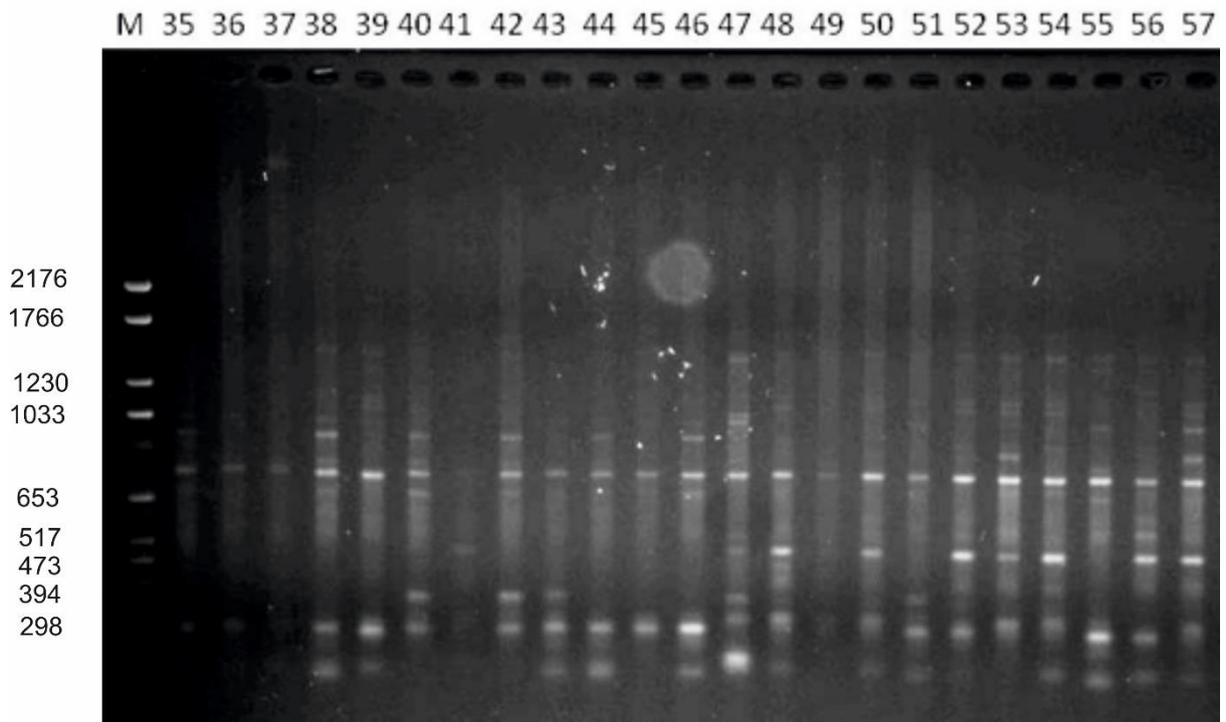

Primers for amplification and sequencing partial beta-tubulin sequences:

**T1** AACATGCGTGAGATTGTAAGT

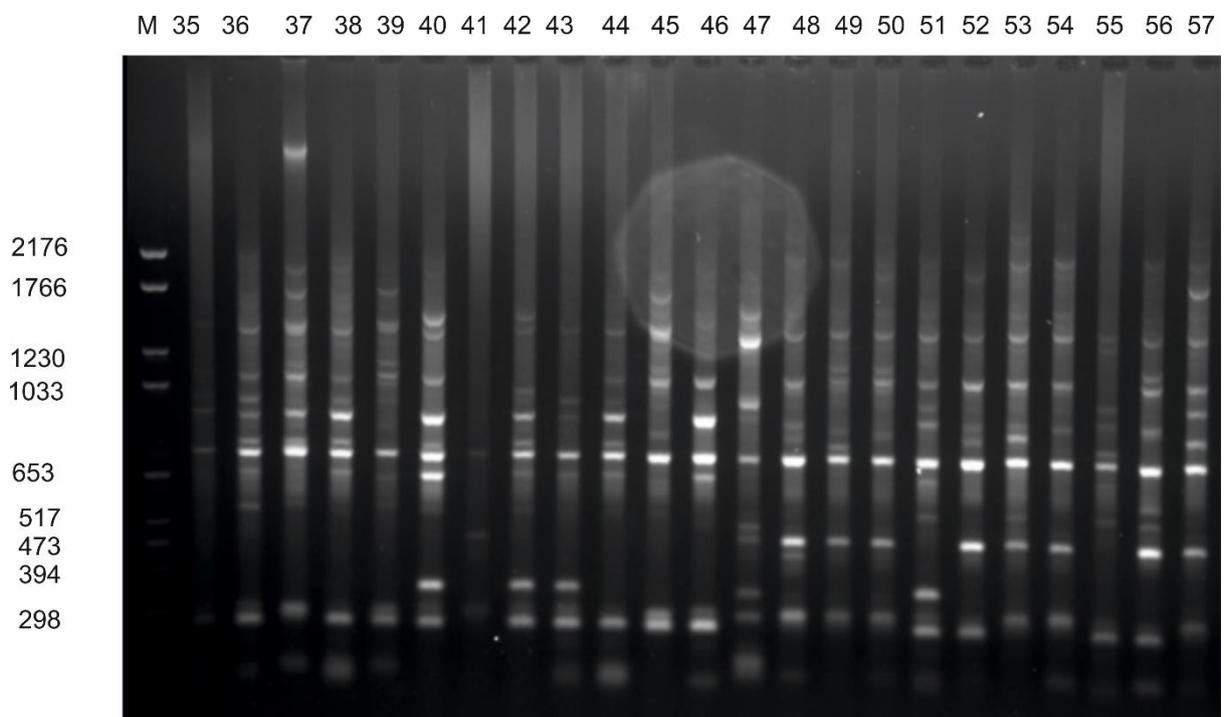

**T22** TCTGGATGTTGTTGGAATC

**tub-conrev** T22 TGACCGAAAACGAAGTTGTC

Figure S1. **Photos of gels** with products of amplification of DNA with ISSR primers

ISSR products with primer E in an, av and ar strains 35-57 as compared to molecular weight standard (M)

ISSR products with primer D in an, av and ar strains 35-57 as compared to molecular weight standard (M)

Figure S2. **PENNY consensus tree of ISSR data.** 24 most parsimonious trees with 112 steps were found.
