

Figure S1. Melting curves derived from analysis of the *lfb1* sequence polymorphisms in *Leptospira* spp. icteric abortions by HRMA. Derivative (upper panel-melting peaks) and raw fluorescent (lower panel-melting curves) emission data recorded during the melting step. Two main profiles were observed with different Tms, the *L.interrogans* group (red lines) and the *L.kirschneri* group (green lines).
