

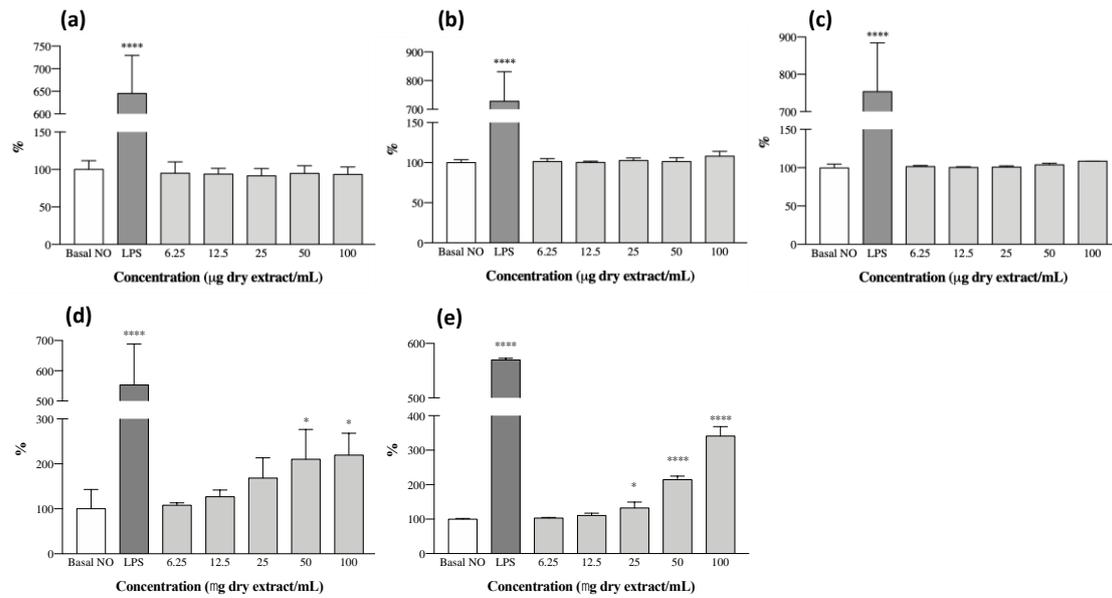

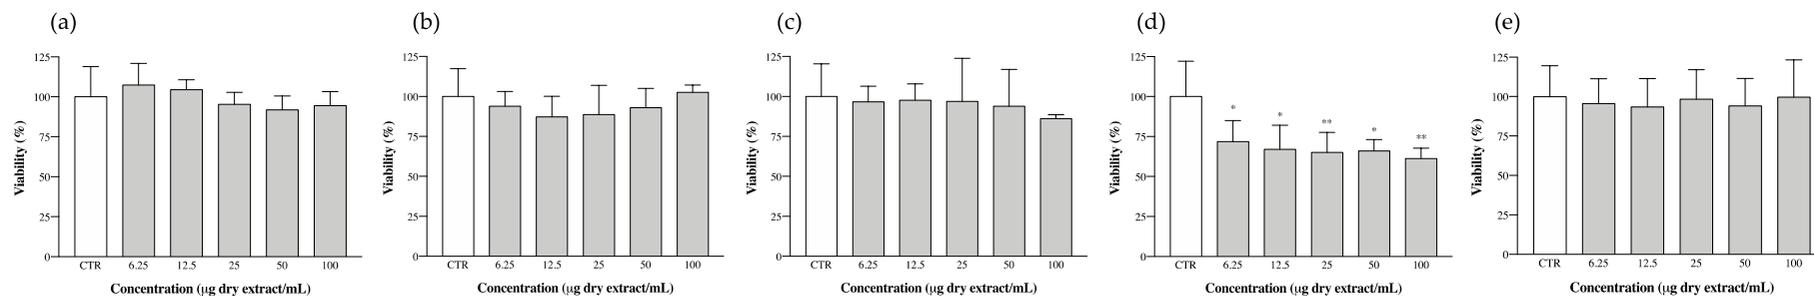

**Figure S1.** Nitric oxide (NO) production by RAW 264.7 cells in the presence of cyanobacteria ethanol extracts, without stimulation with lipopolysaccharide (LPS). **(a)** *Alkalinema aff. pantanalense* LEGE 15481, **(b)** *Nodosilinea (Leptolyngbya) antarctica* LEGE 13457, **(c)** *Leptolyngbya-like sp.* LEGE 13412, **(d)** *Cuspidothrix issatschenkoi* LEGE 03282 and **(e)** *Cyanobium gracile* LEGE 12431. Results are expressed as % of NO relative to control without lipopolysaccharide (LPS) stimulation (Basal NO). LPS represents the NO produced by RAW 264.7 cells with LPS stimulation at 1  $\mu\text{g}/\text{mL}$ . Results are expressed as mean  $\pm$  SD of at least four independent assays, performed in duplicate. \* $p<0.05$ , \*\* $p<0.01$ , \*\*\* $p<0.001$  and \*\*\*\* $p<0.0001$  (ANOVA, Tukey HSD).

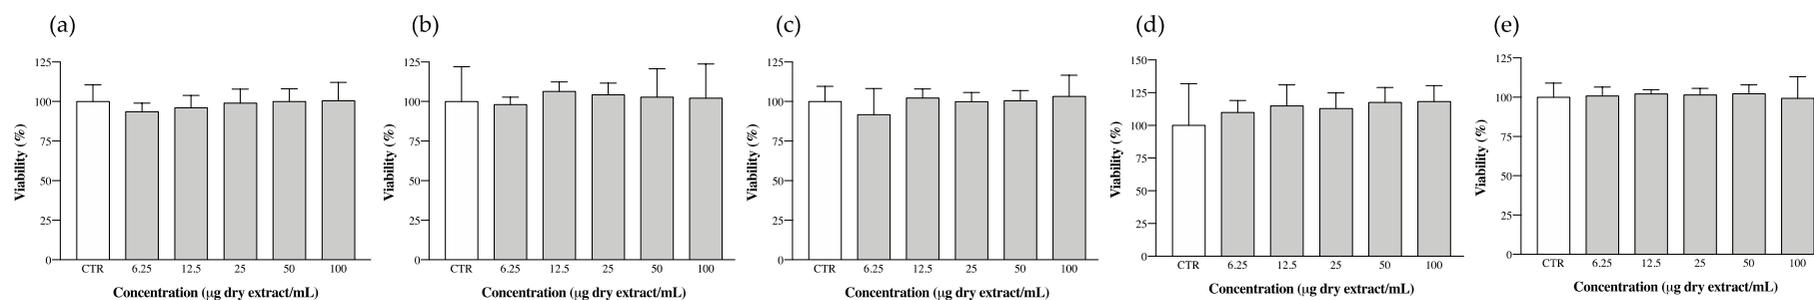

**Figure S2.** Nitric oxide (NO) production by RAW 264.7 cells in the presence of cyanobacteria acetone extracts, without stimulation with lipopolysaccharide (LPS). **(a)** *Alkalinema aff. pantanalense* LEGE 15481, **(b)** *Nodosilinea (Leptolyngbya) antarctica* LEGE 13457, **(c)** *Leptolyngbya-like sp.* LEGE 13412, **(d)** *Cuspidothrix issatschenkoi* LEGE 03282 and **(e)** *Cyanobium gracile* LEGE 12431. Results are expressed as % of NO relative to control without LPS stimulation (Basal NO). LPS represents the NO produced by RAW 264.7 cells with LPS stimulation at 1 µg/mL. Results are expressed as mean ± SD of at least four independent assays, performed in duplicate. \* $p < 0.05$  and \*\*\*\* $p < 0.0001$  (ANOVA, Tukey HSD).

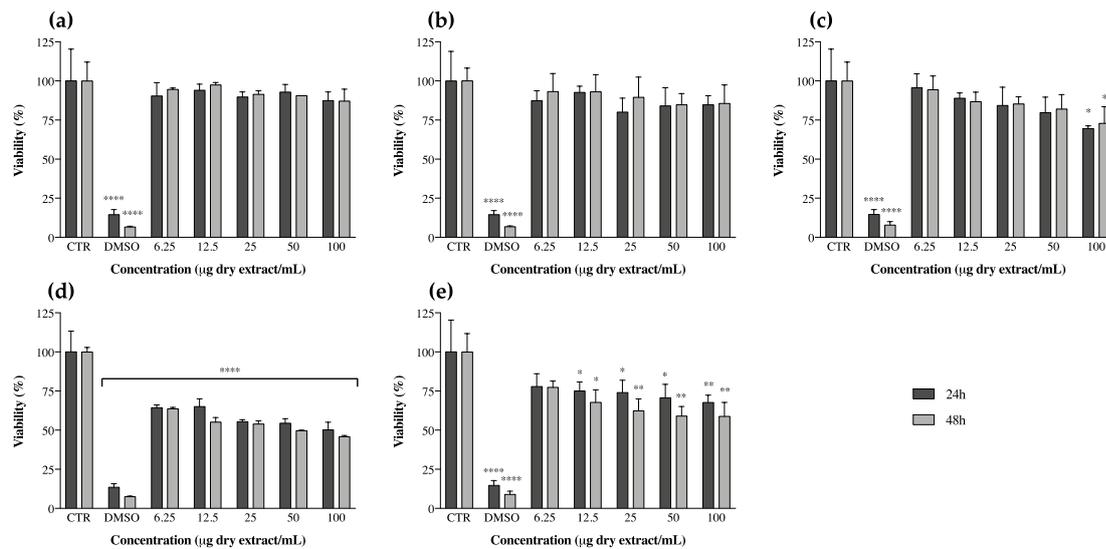

## ETHANOL

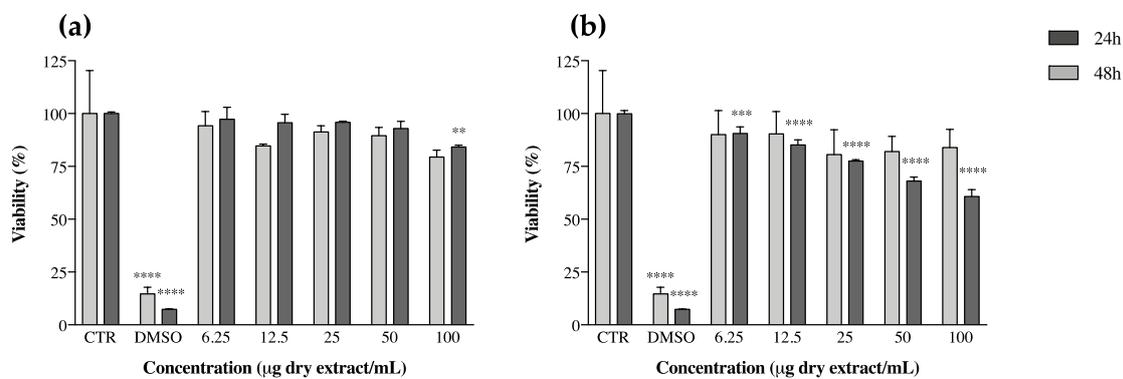

## ACETONE

**Figure S3.** RAW 264.7 cells viability after 24 h of incubation with cyanobacteria ethanol (70% v/v) and acetone extracts. **(a)** *Alkalinema aff. pantanalense* LEGE 15481, **(b)** *Nodosilinea (Leptolyngbya) antarctica* LEGE 13457, **(c)** *Leptolyngbya*-like sp. LEGE 13412, **(d)** *Cuspidothrix issatschenkoi* LEGE 03282 and **(e)** *Cyanobium gracile* LEGE 12431. Results are expressed as % of MTT reduction face to the untreated control (CTR). Results are expressed as mean  $\pm$  SD of at least four independent assays, performed in duplicate. \* $p$ <0.05 and \*\* $p$ <0.01 (ANOVA, Tukey HSD).

**Figure S4.** Keratinocytes (HaCAT) viability after 24h and 48h of incubation with cyanobacteria ethanol extracts. **(a)** *Alkalinema aff. pantanalense* LEGE 15481, **(b)** *Nodosilinea (Leptolyngbya) antarctica* LEGE 13457, **(c)** *Leptolyngbya-like sp.* LEGE 13412, **(d)** *Cuspidothrix issatschenkoi* LEGE 03282 and **(e)** *Cyanobium gracile* LEGE 12431. Results are expressed as % of MTT reduction face to the untreated control (CTR). DMSO (20%) represents the positive control. Results are expressed as mean  $\pm$  SD of at least four independent assays, performed in duplicate. \* $p$ <0.05, \*\* $p$ <0.01 and \*\*\*\* $p$ <0.0001 (ANOVA, Tukey HS)

**Figure S5.** Keratinocytes (HaCAT) viability after 24h and 48h of incubation with cyanobacteria acetone extracts. **(a)** *Cuspidothrix issatschenkoi* LEGE 03282 and **(b)** *Cyanobium gracile* LEGE 12431. Results are expressed as % of MTT reduction face to the untreated control (CTR). DMSO (20%) represents the positive control. Results are expressed as mean  $\pm$  SD of at least four independent assays, performed in duplicate. \*\* $p$ <0.01, \*\*\* $p$ <0.001 and \*\*\*\* $p$ <0.0001 (ANOVA, Tukey HS)
