Supplementary Figure S1: Pairwise non-metric multidimensional scaling (NMDS) plot of bacterial communities for *Z. cucurbitae* samples collected from Dinajpur (red), Jessore (green) and Rajshahi (blue). All p-values are below 0.05 indicating statistically significant differences. 'd' indicates dissimilarity scale of the grid ($d=0.2$ mean that the distance between two grid lines represents approximately 20% dissimilarity between the samples).
