

Supplementary Table S3. Selection pressures acting on codons of PCV2 *cap* gene nucleotide sequences. Each codon under statistically significant positive and negative selective pressure were listed with their respective statistical details. Selection pressure inferring methods applied were FUBAR, FEL and SLAC for both positive and negative selection; with an additional method MEME for positive pressure. Statistical significance were set at $pp > 0.9$ for FUBAR and $p < 0.05$ for FEL, SLAC and MEME.
