

Table S1. 31 pain-related genes

Name	Effect (s)	Reference (s)
<i>SCN9A</i>	Conditional KO (cKO) of Scn9a in specific cell populations were shown to decrease sensitivity to various pain stimuli	[1]
<i>SCN10A</i>	The Possum mutant mice bearing a dominant hypermorphic mutation in Scn10a revealed higher sensitivity to noxious stimuli.	[1]
<i>PRDM12</i>	A key transcription factor in nociceptor neurogenesis.	[2]
<i>ANO1</i>	Are critical for sensory signal transduction	[3]
<i>CCK</i>	Pain modulation	[4]
<i>MAPK1</i>	A crucial role in the transduction of pain signal and contributes to pain hypersensitivity	[5]
<i>MAPK3</i>	The phosphorylation of MARK in the dorsal root ganglion (DRG) and dorsal horn neurons occurs in response to noxious stimulation of the peripheral tissue or electrical stimulation to the peripheral nerve	[6]
<i>RUNX1</i>	Runx1 plays essential roles during the development of sensory neurons involved in circuits mediating pain, itch, thermal sensation and sense of relative position	[7]
<i>NGF</i>	Mediating pain transmission and perception during adulthood	[8]
<i>NTRK1</i>	Autophosphorylates in response to NGF, thereby activating various pathways of intracellular pain signaling	[9]
<i>CACNA1G</i>	Cacna1g-null mice show attenuated neuropathic pain	[10]
<i>TRPV1</i>	Heat hyperalgesia, can be induced when TRPV1 is absent	[11]
<i>TRPV4</i>	As molecular sensors of chemical, thermal, and mechanical noxious stimuli to evoke the pain	[12]
<i>P2RX3</i>	P2X3 receptor involvement in pain states	[13]
<i>P2RX4</i>	P2X4R is dependent on ATP ligand-gated ion channel receptor, which can be activated by ATP and plays an important role in the information transmission of nerve system and the formation of pain	[14]
<i>ASIC1</i>	Activation of ASICs (Acid-sensing Ion Channels) leads physiologically to pain perception	[15]
<i>ASIC3</i>	The ASIC1 and ASIC3 isoforms are particularly important in sensory neurons	[16]
<i>ASIC4</i>	Acid-sensing ion channel (ASIC) 4 promotes the	[17]

degradation of *ASIC1* or inhibits its expression.

<i>CA8</i>	Impact on thermal antinociception	[18]
<i>GRK2</i>	Balancing GRK2 and EPAC1 levels prevents and relieves chronic pain	[19]
<i>ARRB2</i>	Association of polymorphisms in ARRB2 and clinical response to methadone for pain in advanced cancer	[20]
<i>KCNA1</i>	KCNA1 mutation in an Italian proband presenting with myokymia aggravated by painful contractures	[21]
<i>KCNA2</i>	KCNA2 can ameliorates neuropathic pain	[22]
<i>TRAAK</i>	TRAAK channels control pain produced by mechanical stimulation and both heat and cold pain perception in mice.	[23]
<i>KCNIP3</i>	Global gene knockout of <i>Kcnip3</i> enhances pain sensitivity	[24]
<i>KCNJ10</i>	Possible contributors to development of trigeminal neuralgia	[25]
<i>ANO3</i>	Painful-diabetic neuropathy patients show potentially pathogenic variants in <i>ANO3</i>	[26]
<i>OPRMI</i>	Association with morphine pain relief	[27]
<i>OPRL1</i>	Opioid-related nociceptin receptor gene	[28]
<i>OPRK1</i>	Associated with opioid effects	[29]
<i>OPRD1</i>	Impact on Morphine Analgesia	[30]

Table S2. Information of genes sequences in this study

LAC: last common ancestor

Table S7. Predicted deleterious score by PROVEAN and PolyPhen2

Variant	Predicted deleterious score	
	PROVEAN	PolyPhen2
ASIC3(F56L)	-0.540	0.256
ASIC3(D163A)	-1.471	0.987
TRVP1(D471G)	-2.668	0.010
NGF(T202A)	-3.866	0.015
GRK2(E88G)	-1.924	0.992
OPRD1(F159L)	-3.467	0.069
KCNIP3(A127S)	-0.172	0.016
KCNJ10(G350R)	0.450	0.885
ANO3(V635L)	-1.106	0.498

Purplish red labeled values are scores for cetacean-specific amino acid substitutions predicted to affect protein function.

Figure S1

Identification of *ASIC4* gene of *L.vexillifer* and *N. asiaorientalis*. The purplish red box indicates the stop codon.
