

Supplementary Figure S1 : Example of M-13 primer generated RAPD PCR profiles of LAB isolates from goats and used to differentiate genotypes and select isolates for sequencing. 2-6 similar profiles (same genotype), 1(highly similar to 2-6 but with unique bands), 7,9,10,13, 15-unique genotypes, 8,11-similar profiles (same genotypes), and 12,14-similar profiles (same genotype). L-1kb ladder (*NEW ENGLAND BioLabs*® Inc).
