

Figure S1. Percentage of Just-About-Right (JAR) consumers' responses on overall preference for *E. sinensis* in Shanghai (n=100) A, B, and C represent the meat, gonads, and hepatopancreas for females, respectively. D and E represent the meat and hepatopancreas for males, respectively.

Table S1. Sensory descriptors and definitions for each descriptor.

No.	Descriptors	Definitions
1	Grassy	Aromatics associated with mowed lawn
2	Fatty	The aromatics resulting from the natural deterioration of a food rendered fat.
3	Metallic	(1) The aromatic associated with metals, tinny or iron; (2) A flat feeling factor stimulated on the tongue by metal.
4	Meaty	Aromatics associated with cooked meat
5	Toasted	Aromatics associated with baked goods, combined with caramel, sweet and milky
6	Ammonia-like	Aromatics associated with ammonia, slightly irritant
7	Earthy	Flavor associated with soil
8	Fishy	Flavor associated with cooked white fish

Table S2. Retention index, boiling points, odor types, odor descriptions, and thresholds of volatile compounds identified in meat, gonads, and hepatopancreas of *E. sinensis* from three areas.

Code	RI ^a	Compounds	Boiling point (°C)	Odor Type ^b	Odor Description ^c	Threshold ^c (μg/kg)
Aldehydes (21)						
Q1	699	Pentanal	103	Fermented	bready, fruity, nutty	9

M5	1045	2-Heptanol, acetate	-	Brown	fatty, fruity, green	-

N.A. means not available.

a Retention index on DB-5MS column (compared with the RI in the literature).

b Odor types are mainly gathered from the website database.

(<http://www.thegoodscentscompany.com/index.html>)

c Odor descriptions and thresholds are mainly gathered from literature (Gu, Wang, Tao, & Wu, 2013) (Wu, Gu, Tao, Wang, & Ji, 2014) (Wang et al, 2016) (Wu, Wang, Tao, & Ni, 2016) (Zhuang et al, 2016)

Table.S3. The concentrations of volatile compounds were identified in edible parts of *E. sinensis* from three areas ($\mu\text{g/kg}$, n=3).
