Supplemental Figure S1. Effects of supplemental multi-enzyme (MCPC) in diets differing in nutritional levels on apparent ileal digestibility (AID) coefficients of Ca and P of growing-finishing pigs.

PC = positive control; NC1 = negative control 1; NC2 = negative control 2; MCPC = multi-carbohydrase and phytase complex.

^{a,b,c} Means with no common letters differ at $P < 0.05$.

Supplemental Figure S2. Effects of supplemental multi-enzyme (MCPC) in diets differing in nutritional levels on apparent total-tract digestibility (ATTD) coefficients of neutral detergent fibre (NDF) and acid detergent fiber (ADF) of growing-finishing pigs. PC = positive control; NC1 = negative control 1; NC2 = negative control 2; MCPC = multi-carbohydrase and phytase complex.
