

Table S1. Model estimates of initial mean and hourly growth trend for each of the four data sources. Estimates on water flow and activation frequency are from square root transformed data.

Data source	Initial mean	Hourly growth trend
Water flow (L/pig)	0.34	0.000132
Activation frequency (no./pig)	1.25	0.000043
Pen temperature, solid floor (°C)	21.30	-0.000417
Pen temperature, slatted floor (°C)	18.00	-0.001940

Table S2. Model estimates of amplitude (A) and phase shift (c) for each of the three harmonic waves (wave 1: 24 h cycle; wave 2: 12 h cycle; wave 3: 8 h cycle) for each of the four data sources as well as the period (b) provided to each of the three waves for each data source. Estimates on water flow and activation frequency are from square root transformed data.

Data source	A	b	c
Water flow			
Wave 1	0.276	$1 \cdot (2 \cdot \pi)/24$	-1.84
Wave 2	0.018	$2 \cdot (2 \cdot \pi)/24$	-3.06
Wave 3	0.090	$3 \cdot (2 \cdot \pi)/24$	1.62
Activation frequency			
Wave 1	0.770	$1 \cdot (2 \cdot \pi)/24$	-1.82
Wave 2	0.060	$2 \cdot (2 \cdot \pi)/24$	-3.07
Wave 3	0.240	$3 \cdot (2 \cdot \pi)/24$	1.57
Pen temperature, solid floor			
Wave 1	0.341	$1 \cdot (2 \cdot \pi)/24$	-2.06
Wave 2	0.053	$2 \cdot (2 \cdot \pi)/24$	0.39
Wave 3	0.056	$3 \cdot (2 \cdot \pi)/24$	1.84
Pen temperature, slatted floor			
Wave 1	0.465	$1 \cdot (2 \cdot \pi)/24$	-1.97
Wave 2	0.067	$2 \cdot (2 \cdot \pi)/24$	0.53
Wave 3	0.163	$3 \cdot (2 \cdot \pi)/24$	1.73

Table S3. Optimisation results for each data source, investigated by n-fold cross validation (n = number of pairs of event and control pens) with different number of days included in the training data. Each ANN was optimised according to its activation function, number of layers and number of nodes in the hidden layers.

Data source	Training days	Training dataset	No. of pairs	Activation function ^a	No. of hidden layers ^b	No. of nodes in hidden layers ^c	Best threshold ^d	Accuracy ^e	Sensitivity ^e	Specificity ^e
Water flow	-1	1	37	Rectifier	1	(3/3)* predictors	0.46	0.649	0.649	0.649
		2	30	RectifierWithDropout	1	(2/3)* predictors	0.47	0.717	0.767	0.667
	-2:-3	1	33	MaxoutWithDropout	2	(4/3)* predictors	0.45	0.667	0.788	0.545
		2	27	MaxoutWithDropout	2	(4/3)* predictors	0.45	0.630	0.852	0.407
	-1:-3	1	32	MaxoutWithDropout	2	(4/3)* predictors	0.58	0.609	0.625	0.594
		2	25	MaxoutWithDropout	2	(2/3)* predictors	0.56	0.660	0.800	0.520
	-1	1	37	Rectifier	2	(3/3)* predictors	0.41	0.581	0.514	0.649
		2	30	MaxoutWithDropout	1	(2/3)* predictors	0.37	0.767	0.833	0.700
Activation frequency	-2:-3	1	33	RectifierWithDropout	1	(2/3)* predictors	0.61	0.652	0.576	0.727
		2	27	RectifierWithDropout	2	(3/3)* predictors	0.59	0.685	0.593	0.778
	-1:-3	1	32	Rectifier	1	(3/3)* predictors	0.51	0.625	0.938	0.312
		2	25	MaxoutWithDropout	1	(3/3)* predictors	0.62	0.700	0.760	0.640
	-1	1	32	Maxout	1	(2/3)* predictors	0.48	0.672	0.656	0.688
		2	25	MaxoutWithDropout	1	(2/3)* predictors	0.39	0.660	0.920	0.400
Pen temperature, solid floor	-2:-3	1	29	Rectifier	1	(2/3)* predictors	0.78	0.655	0.448	0.862
		2	23	Rectifier	2	(2/3)* predictors	0.42	0.630	0.826	0.435
	-1:-3	1	27	Rectifier	2	(3/3)* predictors	0.47	0.648	0.815	0.481
		2	21	Rectifier	2	(2/3)* predictors	0.83	0.595	0.333	0.857
	-1	1	34	Rectifier	2	(4/3)* predictors	0.49	0.647	0.441	0.853
		2	27	Rectifier	2	(2/3)* predictors	0.52	0.685	0.519	0.852
Pen temperature, slatted	-2:-3	1	29	MaxoutWithDropout	1	(2/3)* predictors	0.71	0.672	0.517	0.828
		2	23	Rectifier	1	(2/3)* predictors	0.58	0.717	0.739	0.696
	-1:-3	1	29	Rectifier	2	(2/3)* predictors	0.76	0.672	0.448	0.897
		2	22	Rectifier	2	(2/3)* predictors	0.56	0.659	0.455	0.864

^a Choice between "Rectifier", "RectifierWithDropout", "Maxout" and "MaxoutWithDropout".

^b Choice between 1 and 2 hidden layers.

^c Choice between (2/3)*predictors, (3/3)* predictors and (4/3)*predictors in layer 1 and (2/3)*layer 1 nodes, (3/3)* layer 1 nodes and (4/3)* layer 1 nodes in layer 2

^d The best classification threshold yielding the highest accuracy (investigated from 0.01 to 1.00 with 0.01 intervals).

^e The performance measures achieved by using the best classification threshold.

Table S4. Predictive performance and best classification threshold for the fixed probability model when investigated on the two training datasets and separately for week 1-6 and week 7-10.

Weeks	Training dataset	No. of pairs	Best threshold ^a	Accuracy ^b	Sensitivity ^b	Specificity ^b
1 - 6	1	32	0.17	0.594	0.531	0.656
	2	27	0.17	0.667	0.481	0.852
7 - 10	1	5	0.026	0.700	0.600	0.800
	2	3	0.014	0.667	0.667	0.667

^a The best classification threshold yielding the highest accuracy (week 1-6: 0.01 to 1.00 with 0.01 intervals; week 7-10: 0.001 to 0.1 with 0.0001 intervals).

^b The performance measures achieved by using the best classification threshold.

Table S5. Predictive performance for the alarm type UNTIMED (training day -1, -2 and -3 included) for each of the four data source models (WF: water flow, AF: activation frequency, PTSOLID: pen temperature above the solid floor, PTSLATTED: pen temperature above the slatted floor) and when combined with each other and the model on fixed probabilities (FIXED) through the Bayesian ensemble strategy.

Bayesian ensemble combination	No. of event cases	No. of control cases	AUC	95% CI	Best threshold ^a	Sensitivity ^b	Specificity ^b	Alarm error rate ^b
WF	11	50	0.721	0.539-0.904	0.57	0.818	0.580	0.700
