

### Supplementary Materials

**Figure S1.** Relationship between distant disease at first presentation and ACTA2 expression level. We divided patients with primary malignant glioma ( $n = 50$ ) into two groups: the top third with high ACTA2 gene expression ( $n = 16$ ) and the remaining two-thirds of cases ( $n = 34$ ) and compared the proportion of cases with distant lesions that were not contiguous with the main tumor mass using Gd contrast-enhanced MRI images of the brain at initial onset. The ACTA2 high expression group ( $n = 16$ ) was significantly more likely to have distant lesions (31.3%) than the ACTA2 low expressing group ( $n = 34$ , 8.8%) ( $p = 0.044$ ). Statistical analysis was performed using Pearson's chi-square test.

**Figure S2.** ACTA2 gene expression level by grade in WHO grade 2-4 clinical gliomas ( $n = 667$ ) in the TCGA cohort. ACTA2 expression was significantly higher in grade 4 gliomas ( $n = 153$ ) compared to grade 2 ( $n = 226$ ) and grade 3 gliomas ( $n = 244$ ) ( $p < 0.001$ ). Analysis of variance was performed to obtain the p-value.

**Figure S3.** The Relationship between ACTA2 gene expression and survival prognosis of gliomas in the TCGA. **A:** Among WHO grade 2-4 glioma patients ( $n = 667$ ), those in the high ACTA2 expression group ( $n = 285$ ) showed significantly shorter overall survival (OS) compared to those in the low ACTA2 expression group ( $n = 382$ ) ( $p < 0.001$ ). **B:** In primary glioblastoma (GBM) cases with IDH-wild type ( $n = 357$ ), the high ACTA2-expressing group ( $n = 138$ ) exhibited significantly shorter OS in comparison to the low ACTA2-expressing group ( $n = 219$ ) ( $p = 0.008$ ). **C:** Among 12 patients with recurrent glioblastoma of IDH-wild type, the high ACTA2 expression group ( $n = 7$ ) had notably shorter OS than the low ACTA2 expression group ( $n = 5$ ) ( $p = 0.001$ ). We used the maximum selection rank statistic to determine these groupings' optimal cutoff value for ACTA2 expression. Statistical significance was determined using the log-rank test.
