

## Supplementary Materials

**Figure S1.** Effect of MG on cell viability. Cells were pretreated with MG for (100–600  $\mu\text{M}$ ) for 24 hours, and then their viability was determined using an MTT assay. Experiments were conducted in triplicate ( $n = 3$ ), and the data are expressed as the mean  $\pm$  SD. \* Significant difference with the controls ( $p < 0.05$ ); \*\* significant difference with the controls ( $p < 0.01$ ); \*\*\* significant difference with the controls ( $p < 0.001$ ).
