

Figure S1. Effect of compound treatment following exposure to high glucose in yHUVCE cells.

Cells were treated for 24h with a single compound or with their combination. Relative mRNA expression of IL-1 β (A) and relative miRNA expression of miR-146a (B). Results are expressed as mean \pm SD from three independent biological replicates. Asterisks (*) indicate significance versus NG; * $p < 0.05$, ** $p < 0.01$. NG, normal glucose; HG, high glucose.
